PREFACE

Purpose of the Face Report Card

The purpose of the Face Report Card is to provide feedback to individual agencies regarding the quality of images submitted. This feedback includes suggestions which, if followed, will improve the quality of future image submissions. As the quality of images submitted to the Federal Bureau of Investigation (FBI) improves, it is expected that agencies participating in the FBI’s face matching systems will benefit.

The Importance of Image Quality in Facial Matching Systems

The performance of facial matching systems is highly dependent upon the quality of images enrolled in the system. Therefore, it is important that agencies submit images that meet, at minimum, specific image quality metrics and recommendations so system users may realize the maximum potential benefit.

Figure 1 demonstrates the negative impact a poor-quality image can have on the facial system’s ability to detect a face. Note the high-quality image the landmarks, including the subject’s eyes and the center of his mouth, have been correctly detected and marked. In the low-quality image, the system failed to detect the subject’s eyes and mouth properly.

<table>
<thead>
<tr>
<th>Figure 1: Detected eye and mouth positions for high- and low-quality images.</th>

[Document Number]
**Documented Standards and Best Practices**

The following documents will be used as references throughout the Face Report Card. It is recommended that all law enforcement agencies which submit images to the FBI review these documents. Agency familiarity and compliance with these standards and best practices mitigates the risk of submitting an unsuitable, poor-quality image.

**ANSI/NIST-ITL 1-2011: Data Format for the Interchange of Fingerprint, Facial & Other Biometric Information**

This document is freely available from the ANSI/NIST-ITL\(^1\) Standard Homepage.\(^2\) It defines the format that must be used when transmitting biometric information. The following sections of the document should be reviewed:

1. 7.7.5 Subject acquisition profile / SAP / FAP / IAP
2. Annex E: Facial Capture Requirements and Recommendations

**Electronic Biometric Transmission Specification (EBTS) Version 9.3**

This document is freely available from the FBI Biometric Specifications (BioSpecs) website.\(^3\) The EBTS implements and conforms to the ANSI/NIST-ITL 1-2011 Standard and documents the requirements for transmitting biometric transactions to the FBI.

As noted in the Appendix K reference notes of the FBI EBTS v9.3, “Subject Acquisition Profile (SAP) values of 40 and above are preferred by IAFIS\(^4\)/NGI for facial photo enrollment.” Table 1, below, summarizes the minimum resolutions which must be met at each SAP level.

<table>
<thead>
<tr>
<th>SAP Value</th>
<th>Minimum Resolution</th>

# ASSESSMENT SUMMARY

Trained face examiners reviewed 14,408 images submitted to the FBI from the state of Oregon. These images were evaluated in the context of six major categories. A summary of the evaluation is provided in the table below. Detailed assessment information is provided in the next section.

<table>
<thead>
<tr>
<th><strong>Image Resolution</strong></th>
<th>Insufficient</th>
</tr>
</thead>
<tbody>
<tr>
<td>The images do not meet the minimum image resolution requirements:</td>
<td></td>
</tr>
<tr>
<td>images do not meet the minimum resolution requirements of 0.3 megapixels. Only of the images meet or exceed the FBI's recommended resolution of 0.75 MP.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Lighting</strong></th>
<th>Insufficient</th>
</tr>
</thead>
<tbody>
<tr>
<td>More than of the submitted images are negatively affected by lighting conditions:</td>
<td></td>
</tr>
<tr>
<td>images are impacted by harsh lighting and images are impacted by low lighting.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Pose</strong></th>
<th>Good</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than of the submitted images are negatively affected by the subject's pose:</td>
<td></td>
</tr>
<tr>
<td>images are impacted by pitch, images are impacted by roll, and images are impacted by yaw. In total, images are negatively impacted by one or more improper pose angles.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Interference</strong></th>
<th>Insufficient</th>
</tr>
</thead>
<tbody>
<tr>
<td>More than of the submitted images are affected by obstructions which block all or part of the subject's face, profile, or outline:</td>
<td></td>
</tr>
<tr>
<td>images had an inappropriate background, hair obscured the subject's face in images and images were negatively impacted by dark glasses or glare off of the lenses.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Composition</strong></th>
<th>Acceptable</th>
</tr>
</thead>
<tbody>
<tr>
<td>Between and of the images are negatively impacted by improper composition characteristics: the subject was not centered in images and the subject had an inappropriate facial expression in images</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Modality</strong></th>
<th>Good</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than of the submitted images are incorrectly identified as face images.</td>
<td></td>
</tr>
<tr>
<td>scar, mark, or tattoo images were included in this dataset. Only face images should have been included.</td>
<td></td>
</tr>
</tbody>
</table>
**Improvement Opportunities**

**Image Resolution**

The median image resolution for this image collection was [ ] MP (megapixels) which is well below the recommended image resolution of 0.75 MP. If possible, the FBI recommends the purchase of new image capture devices capable of capturing images at resolutions exceeding 1.3MP. Such devices are available for under $100. Submitting images at a resolution of 1.3MP would improve the score in this category from "Insufficient" to "Good."

**Lighting**

It is difficult to create an ideal lighting environment, but it is important to create a lighting environment in which the detail of the subject's face is not lost in highlights or shadows. Figure 2, below, may be used as a reference for adequately illuminating the subject without introducing shadows on the subject's face. Review the detailed assessment of the lighting category for additional improvement suggestions.

![Figure 2: A sample lighting arrangement.](image)

**Interference**

The most common deficiency in this category is background behind a subject; it accounts for [ ] of all interference-related feedback items identified by the face examiners. This deficiency can be addressed by positioning the subject in front of a uniform gray, matte (dull, flat, and without texture) surface prior to taking the picture. It is possible to produce a satisfactory surface by purchasing a portrait background for approximately $50 or painting a surface using a paint that simulates an 18% uniform gray background.

---

July 16, 2012

[Document Number]
If all instances of background deficiencies were to be corrected, the percentage of acceptable images for this component would increase from [ ]. This would, in turn, result in an improved score of "Acceptable" for this component.

The second most common deficiency in this component is the presence of hair which obscures the face (facial hair is not included). This deficiency accounted for [ ] of all interference-related feedback items, but it can be effectively corrected simply by positioning the subject's hair so that it does not obscure the face. If, in addition to correcting the deficiencies in background interference, all instances of hair-related feedback items were corrected, the percentage of acceptable images for this component would increase from [ ].
DETAILED ASSESSMENTS BY CATEGORY

**Image Resolution**

Image resolution measures how much detail is stored in a digital image. It is generally measured in megapixels (MP) where 1 MP is approximately equal to 1 million pixels. For images taken with a digital camera, image resolution can be estimated by multiplying the image’s width and height (in pixels) and dividing by 1,048,576.

**Applicable Specifications**

The ANSI/NIST-ITL 1-2011 standard specifies face images must be at least 480 pixels in width and 600 pixels in height; however, the FBI’s EBTS prefers images which meet the Subject Acquisition Profile Level 40. SAP-40 images must be at least 768 pixels in width and 1024 pixels in height.

**Scoring**

The score for this section is determined by calculating the median image resolution from the entire collection of images your agency submitted to the FBI.

<table>
<thead>
<tr>
<th>Resolution (MP)</th>
<th>&lt; .30</th>
<th>.30 - .75</th>
<th>.75+</th>
<th>Median</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frequency</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Table 3: Image Resolution Metrics

<table>
<thead>
<tr>
<th>Score</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Good</strong></td>
<td>The median image resolution is greater than or equal to .75 MP.</td>
</tr>
<tr>
<td><strong>Acceptable</strong></td>
<td>The median image resolution is greater than or equal to .30 MP but less than .75 MP (the preferred image resolution according to the FBI’s EBTS).</td>
</tr>
<tr>
<td><strong>Insufficient</strong></td>
<td>The median image resolution is less than .30 MP (the minimum image resolution according to ANSI/NIST-ITL 1-2011).</td>
</tr>
</tbody>
</table>

Improvement Suggestions
Lighting
The Lighting category evaluates the ways poor lighting environments negatively impact the quality of submitted images.

Applicable Specifications
ANSI/NIST-ITL 1-2011 provides the following guidance for image lighting:

- Subject illumination shall be accomplished using a minimum of three (3) point-balanced illumination sources.
- Appropriate diffusion techniques shall be employed and lights positioned to minimize shadows and eliminate hot spots on the facial image.
- The region of the face, from the crown to the base of the chin, and from ear-to-ear, shall be clearly visible and free of shadows. In particular, there shall be no dark shadows in the eye-sockets due to the brow, and the iris and pupil of the eyes shall be clearly visible.
- Proper lighting shall contribute to the uniformity of illumination of the background.
- There should be no shadows visible on the background behind the face image.
- Unnaturally colored lighting is not allowed. The lighting shall produce a face image with natural looking skin tones when viewed in typical examination environments. “Red-eye” is not acceptable.

<tr>
<td>Good</td>
<td>The percentage of images that is negatively impacted by lighting conditions is less than 10%.</td>
</tr>
<tr>
<td>Acceptable</td>
<td>The percentage of images that is negatively impacted by lighting conditions is greater than or equal to 10% but less than 25%.</td>
</tr>
<tr>
<td>Insufficient</td>
<td>The percentage of images that is negatively impacted by lighting conditions is greater than or equal to 25%.</td>
</tr>
</tbody>
</table>

Examples of Unacceptable Images

Figure 3: Examples of Unacceptable Images (Lighting)

![Image of lighting examples]

Low Lighting  Harsh Lighting  Unnatural Color

Improvement Suggestions
Pose

Applicable Specifications

ANSI/NIST-ITL 1-2011 provides the following specifications regarding the subject’s pose in a mugshot:

- The full-face or frontal pose is the most commonly used pose in photo lineups and shall always be captured.
- For full profile images, the entire body should be rotated with the head.
- The uncertainty in the Yaw pose angle determination shall be less than 5 degrees of the frontal photograph.
- The uncertainty in the Pitch and Roll angles shall be less than 5 degrees.

Scoring

</tr>
</tbody>
</table>
Examples of Unacceptable Images

Figure 4: Examples of Unacceptable Images (Pose)

Pitch | Yaw | Roll

Improvement Suggestions
Interference

Applicable Specifications

ANSI/NIST-ITL 1-2011 provides the following recommendations for limiting the amount of disruptions in an image:

- Ensure that the background completely fills the image frame behind the subject. If possible, avoid the presence of any visible shadows and other objects in the background, such as a clock face.
- Head coverings, including hats and scarves, shall not be worn. The full face and ears must be displayed.
- The subject’s hair shall be moved to reveal the full face and ears. If hair covers the ears, then when possible, two photographs shall be captured – one with hair in its normal state, and one with hair pulled back behind the ears.
- For subjects who normally wear eyeglasses, every effort should be made to capture the mugshots with the glasses on. If significant glare in the glasses is evident in the photograph, then a second frontal mugshot image should be captured of the subject without glasses.
- The subject’s face should not be presented with heavy makeup, dirt, blood, etc.
- Only one face per image is allowed.
- If bruising, injuries, bandages, or medical conditions exist, these shall be captured as is.

Improvement Suggestions
Modality
The modality component of the Face Report Card measures, as a percentage, the number of images which should not have been submitted as Type-10 Face record. Type-10 Face record is characterized as having a value of FACE in the 10.003 field of the record per the EBTS. If the image included in a Type-10 Face record is not a face image, it is considered unacceptable, and it should not have been included in the submission.

Scoring
Scoring for this component is determined using the following process:
1. Face examiners review the images included in Type-10 Face records and mark any images that are not faces as a fingerprint, palm print, iris, SMT, or other modality.
2. The count of images identified as non-face images is multiplied by 100 and then divided by the total number of images in the collection. The value is rounded to the nearest integer; values which have a fractional component of \( \frac{1}{2} \) are rounded to the nearest even number (e.g. 83.3 rounds to 83, 83.5 rounds to 84, and 84.5 rounds to 84).

Universal Facial Workstation Frequently Asked Questions

The Universal Face Workstation (UFW) software has been developed unilaterally with the facial recognition search function of the NGI Interstate Photo System initiative. The UFW software is being provided to law enforcement free of charge. UFW will provide law enforcement agencies without established facial recognition systems the ability to send, receive, and view facial recognition transactions and participate in the FBI's Interstate Photo System Facial Recognition Pilot (IPSFRP) and eventually Increment 4 full operating capability.

1. Please describe the Universal Facial Workstation (what it consists of)
   UFW is software that allows users to make photo enhancements, submit probe images to the FBI for a facial recognition search and receive candidate list in return.

2. Is the FBI/CJIS providing the hardware and software or just the software?
   Software

3. Is there any hardware, software, network or security requirement to participate in this Project?
   The UFW software can be installed on multiple operating platforms but needs to access the CJIS WAN for submissions. The UFW meets criteria delineated in the CJIS Security Policy.

4. If the State is providing the technology, could the State be assigned more than one unit?
   Upon release of the 1.0 version this summer, multiple copies of the UFW software can be delivered.

5. Would training be provided?
   Yes

6. How soon the training will take place?
   It can be conducted during delivery of the UFW software this summer.

7. Any limit number of State/agency staff to receive training?
   No (within reason)

8. Would the FBI/CJIS provide the system support?
   Yes, minor configuration will need performed on UFW and will be handled remotely from CJIS.

9. Would the State be able to access the entire database or be limited to just the mug shots we have submitted?
   The State/local agency would have access to the IPSFRP repository which is approximately 12.5 million mug shots.

10. Would there be a Help Desk toll free number where to call to report problems and answer questions regarding the use of the unit(s)?
    Several numbers will be provided for assistance but none are toll free.

11. Would the UFWs be using the existing connection (CJIS WAN) used by AFIS to connect with the FBI?
    Yes

12. Would the FBI/CJIS staff be responsible for connecting the workstation(s) to the FBI?
    FBI staff can install the UFW on site at the State/local agency if requested but it is preferred that State/local agency technical Staff perform the installation.
13. What are the requirements to participate in the project?
   They are delineated in the IPSFRP MOU and Technical Specification documents.
14. For how long will the pilot project last?
   The IPSFRP will last until full operating capability (FOC) in 2014.
15. What is next after the pilot project?
   FOC will include all enhancements (SMT text based searches, bulk submissions, easy searching of photos, access to special population files) to the NGI Interstate Photo System initiative.
16. After the pilot project is completed, is the State/local agency obligated to anything?
   No, participation in the pilot and NGI FOC are on a volunteer bases. State/local agency will be asked to continue to provide success stories and statistical information (if an identity is made from a candidate list and what rank) upon transition from pilot to FOC. General feedback is always welcome.
17. How soon will the FBI be able to provide the workstation(s)?
   The UFW 1.0 version is software and will be available this summer.
18. How soon will the State/local agency be able to use the workstation(s)?
   The UFW 1.0 version is software and could be used shortly after installation and configuration.
19. Will the program be available to only State/local agency users or to local users too?
   The software is for law enforcement agencies only and access should be determined by State/local agency.
20. If available to local users, how would they access the information?
   Depends on where the software is installed (at the CSA or Local Agency)
21. Can the program be placed on the State/local agency web portal?
   No, the software was developed to be a standalone workstation.
22. What are the minimum requirements for the servers involved in this project?
   This is TBD, but current development is being done on VM blade servers with dual Intel Xeon 5600 processors and 8GB of RAM. More information will be available as we complete each stage of development.
23. What is the operating system of the software?
   Windows, Mac OS, and Redhat/CentOS
24. What operating system will the client run on?
   Windows, Mac OS, and Redhat/CentOS
25. What are the implementation instructions?
   This will vary from one installation to the next. UFW/BIP is being designed to support Zero Configuration which allows the UFW, at startup time, to find the BIP and to gather all required configuration information from the BIP. This allows for lightweight client installations, and even network based invocation techniques such as Webstart. Documentation will be provided to guide System Administrators through the install process for the 1.0 release. This will also provide a list of open source dependencies that will be required to install/run UFW/BIP. Currently the install guide is specific to our internal CJIS deployment plans.
Attached below is the latest version of the IPS Renewal PTA. Thank you so much for your assistance in this regard.

Subject: Facial Recognition Technology Spurs Privacy Concerns for Feds (Government Technology News)

FYI...

Facial Recognition Technology Spurs Privacy Concerns for Feds: October 21, 2011 By Brian Heaton

Facial recognition software is increasingly being used by both the public and law enforcement. But while the benefits, such as assisting police and federal agencies to keep criminals off the streets, are obvious, at least one member of Congress is concerned about privacy ramifications from the rapidly advancing technology.

"As in many fast growing and changing sectors, public policy has not kept pace with the development of this sort of technology," Rockefeller wrote in a letter to FTC Chairman Jon Leibowitz. "The privacy concerns are evident. As the Commerce Committee considers privacy legislation in the future, we will need to understand the capabilities of this technology as well as the privacy and security concerns raised by their development."

Rockefeller’s request is timely, as the FTC is holding a free workshop on Dec. 8 to address facial recognition technology concerns and privacy implications. The workshop will feature guests from consumer protection organizations, academics and business as well as industry representatives and privacy professionals.

Nextgov’s Aliya Sternstein reported that the FBI plans to launch a nationwide facial recognition service for law enforcement agencies in various states by January 2012. If the system works as described, authorized personnel will be able to upload a photo of a person and receive a list of mugshots ranked by how similar the features of the person are to those in the photo.

Although the tool won’t provide an exact match, it will provide a non-discount hits from the FBI’s biometric identification system.

Sean Mullin, CEO of BI2 Technologies, which created the Mobile Offender Recognition System, will be shielded from disclosure of the Attorney Work Product Doctrine, the Attorney-Client Privilege, and/or the Deliberative Process Privilege, and is not to be produced outside of the FBI without the written authorization of the FBI Access Integrity Unit or the FBI Office of General Counsel.
and Information System (MORIS) device that connects to a smartphone and includes facial recognition technology, said he applauds Rockefeller's push to clarify what potential impacts the facial scan advancements might have in regard to privacy and safety.

"It's very important at the federal level because of the complexity of the privacy issues that can potentially result from this technology that the federal government takes a very careful look at it," Mullin said regarding facial recognition.

"Particularly with the presumption of privacy in the public space, whether it is video cameras on toll booths or corners of streets, or pretty much everywhere in public life now there is no presumption that your photo can't be taken," he added. "The question is how that technology on the back end can be used. That's why I think what Sen. Rockefeller is doing is entirely appropriate."

Mullin's company has actively tested its MORIS device — which along with facial recognition technology, also scans fingerprints and irises — to various local, state and federal law enforcement agencies and is set to deliver the technology to its first customers. But he isn't worried about any potential loss of business the federal look into privacy might have, primarily because the device is hooked up to law enforcement databases, not public ones.

"There are no plans that I'm aware of to have it be used to look at any public database, so I don't anticipate any public backlash," Mullin said.

"To look out in these public spaces, whether it is Facebook or others, to look at that, it's critical," he added, regarding Rockefeller's request to the FTC. "But I don't think it's going to have any significant change on how law enforcement does its work."

Subject: Facial Recognition

I spoke with you at the IACP LEIM conference and received a business card from you. I have written Facial Recognition on the back of the card but can't remember what you were interested in related to Facial Recognition. I really should take better notes. Please let me know if there was something specific that you were interested in receiving about the topic?

Thank you,
NGI-ITU

I am going to try to send one now.

Sorry I am just getting to this.

That is great news. When you have a chance, please send the good pic from Kent.

issues were corrected in the second transaction. We will be in touch.

We will get back to you with info on the second submission this afternoon.
Any news on this second submission?

We evaluated the transaction from yesterday, the following needs fixed. Once you get it fixed, shout me and we will try another transaction. Let me know if you have any questions. Thanks

All,
Alright fellas,
Here is what is going on with the FR pilot.

So here is the plan...
If you have any questions just give me a shout, let me know when MSP plans on sending the test so I can have our people watching for them.

Quantico, VA 22135
All,

I wanted to reach out to everyone who's State/Agency is potentially participating in the FBI's facial recognition pilot and let you know of a training opportunity.

The Biometric Center of Excellence and the Training and Records Testimony Team are providing a facial identification training class December 5-9, 2011 in Stafford, VA and have extended the invitation to potential pilot participants.

Unfortunately, the FBI will not be able to pick up the tab for this trip. Let me know if you would like more information.

Hi [name]

Hope all is well in Hawaii. You probably got the phone message, but wanted to let you know [name] and I tried to reach you this afternoon while you were in a meeting.

We wanted to talk with you about our brief discussion during the NGI User Conference regarding the Secret Service (?) contact who told you he had talked with [name] about support for the APEC.

Are you in the office tomorrow? We planned to call back on Tuesday after the holiday weekend, but if you are in the office tomorrow and if it would be more convenient, you can call me tomorrow. Just ask for [name] if you are not available, we can certainly wait until next week. Just let me know what works for you.

Cc: 

Subject: RE: Mobile Identification/Facial Recognition Pilot participation

Hi (aka @):

I just got off the phone with FBI ASAC from the Hawaii Office. I was referred to him by our AG Chief Investigator after the APEC Exec Committee meeting said that he already spoke to and Hawaii will get access for APEC...so I will close the loop on this one.

However, the State of Hawaii is still interested in working with you on the RISC rapid search functionality and as it relates to facial recognition. Is the MOU the next step?

Thanks,

Hawaii Criminal Justice Data Center

Subject: FW: Question Answers

Answers are below. Feel free to have your tech staff contact __________ (cc'd) he is our IPSFRP/UFW technical expert.

FBI-CJIS

__________
1. What are the minimum requirements for the servers involved in this project?
   a. This is TBD, but current development is being done on VM blade servers with dual Intel Xeon 5600 processors and 8GB of RAM. More information will be available as we complete each stage of development.
2. What is the operating system software?
   a. Windows, Mac OS, and Redhat/CentOS
3. What operating system will the client run on?
   a. Windows Server, Mac OS, and Redhat/CentOS
4. What are the operating systems supported for the client and the server?
   a. See answers to questions 2 and 3
5. What are the minimum hardware specifications for the server?
   a. See answer to question 1
6. What are the implementation instructions?
   a. This will vary from one installation to the next. UFW/BIP is being designed to support Zero Configuration which allows the UFW, at startup time, to find the BIP and to gather all required configuration information from the BIP. This allows for lightweight client installations, and even network based invocation techniques such as Webstart. Documentation will be provided to guide System Administrators through the install process for the 1.0 release. This will also provide a list of open source dependencies that will be required to install/run UFW/BIP. Currently the install guide is specific to our internal CJIS deployment plans.
Good morning.

Thank you for your offer to visit with us.

We could very well consider your offer in the future, but for now, since we need to learn more about what it will take for us to be able to implement the Universal Facial Workstation technology and be able to make a decision on committing to this pilot project, what I would like to suggest is for you to help us by providing the following information:

1. What are the minimum requirements for the servers involved in this project?
2. What is the operating system the software?
3. What operating system will the client run on?
4. What are the operating systems supported for the client and the server?
5. What are the minimum hardware specifications for the server?
6. What are the implementation instructions?

We would like to have your technical staff contact our technical staff directly, to discuss technical detail information about this pilot project. Our contact person is reached at

As I mentioned before, it may turn out that a future visit from you and your staff, will also be beneficial.

will be out of his office

Thank you for your effort in helping us to participate in this project.

Please let me know if you have any questions.

Thanks,

No problem, we could also coordinate a visit so we can provide a technical presentation if you all would like...I am out till Thursday but will try to get the information to you asap.

Would it be possible to provide any hardware, software, networking specifications, if any, that will be required to implement the Universal Facial Workstation pilot software?

Would you be able to provide any contact information of the agencies that are currently using it?

Please let me know if you have any questions. Maybe you and I can talk on the phone.

Thanks,

Hey,

It would not be a problem to stay with SAP 30 for now until you are ready to upgrade, we (FBI) will keep things in place for our legacy customers. Kansas is not the only state dealing with that problem. Give me a shout if you have any questions upon reading the documentation.

Hello

Thank you for the information.

It has been a while since we communicated with each other. I hope you are doing well.

I have a question, would it be a problem to continue collecting mug shots at SAP 30, even though recently raised the minimum to SAP 40. Currently, that's what we have, and even though we will be looking into upgrading to Level 40, at this point we cannot do it because of the lack of resources and we really don't know how long it will be before we can enhance it to SAP 40.

I will be looking at this documentation and let you know if I have any questions.

I appreciate your assistance.
Thanks,

How have you been? It's been a few years since we last talked about photos. I received your questions from [Name] and [Name] and have attached the Interstate Photo System Facial Recognition Pilot (IPSFRP) Technical Specification that can give you insight on some of the photo/system requirements that we have specifically for the facial recognition pilot.

Also, the quality standards are still a minimum of SAP 30 has recently suggested raising the minimum to SAP 40.

Check out these sites for some of the other best practice for image capture.

www.fiswg.org and www.nist.gov
Both have some good documents. Look over them and if you have any other questions feel free to give me a shout.

7/16/2012
Sorry, but those were our "general" template MOUs that we send out for a quick review by the State/Agency to make sure there are no major issues, then we tailor them for each State/Agency and our Director signs off on them first. Is the AG going to sign for Maryland or is FBI-CJIS

Sent via BlackBerry

I was under the impression that I was to start the MOU Process... I modified the documents and both MOU's have been sent to our AG for review. I have attached them to this email....

Thanking you in advance,

Information Technology and Communications Division

All,
I just wanted to say thanks again for taking time out of your day to talk about the face pilot this past Tuesday.

As for my action item, the CJIS Audit Unit will not be auditing until FOC in 2014. The audit will be the same as it is now for dissemination of CHRI and following the CJIS Security Policy's encryption and authentication criteria, so the backend logging we talked about would be a great solution to maintain compliance.

I have started the MOU for the face pilot participation and will sending it up our chain for signatures. I have _____ and his information as the signature for the MOU. Is the following...
correct - Maryland Department of Public Safety Correctional Services? Let me know. Thanks

Meeting/Visit on October 4th

Sent: Thursday, September 08, 2011 1:17 PM
To: 

Good afternoon

Please be informed that our legal person is reviewing the MOU that you were asking about.

As per our phone conversation, please see directions below.

6776 Reisterstown Road
Pikesville, MD 21215

From 695, take Exit 20 toward Pikesville. This will put you on Reisterstown Road.
Drive about 2 miles to the Reisterstown Road Plaza. Before you see the Reisterstown Road Plaza sign, you will see an Exxon Gas Station and Applebee’s on your right.
Make a RIGHT on Brookhill Road (which is between the Exxon gas station and Applebee’s)
Make first LEFT and find a parking spot. You may want to park next to the Applebee’s.

Go to the White portion of the building which is the North Tower and one of us will get you and escort you to the meeting.

If you have any questions or need anything else, please feel to contact me.

Subject: Re: FBI IPSFRP IP ADDRESS CHANGE!!!!!!

Take a look at the below email from the FBI which gives us notification of an IP change for the FBI FR transactions. I would assume

Please advise

5/30/2012 2:04 PM >>>

This is the email that I left you a voicemail about. Shout me out if you or have questions. Sorry Brotha.

Due to the merger of EFCON services into the NGI system currently anticipated for June 10, 2012, NGI is requesting IPSFRP User Agencies to make a change to the IP address currently used for FRS/SRB transactions. NGI currently sends and receives FRS/SRB transactions. After the implemented change, NGI will send and receive FRS/SRB transactions

Any associated IPSFRP mail server configuration and Firewall configurations will have to be updated to reflect this change in order to successfully communicate upon cutover.

This IP address change must be completed on June 10 for your agency to continue to receive IPSFRP services. The exact time frame for this change on June 10 is between 3:00am-6:00am.

Please direct any questions/concerns regarding this change directly to me. Unfortunately, the IP address change is unavoidable with the merger of EFCON services to the NGI capabilities. We apologize in advance for any inconvenience this change may cause to your agency.

Re: Face Training

MSP is very interested in this training and would like to attend and get more information as it come in. Have a great weekend.

All, 
I wanted to reach out to everyone who’s State/Agency is potentially participating in the FBI’s facial recognition pilot and let you know of a training opportunity.

the Biometric Center of Excellence and the Training and Records Testimony Team are providing a facial identification training class December 5-9, 2011 in Stafford, VA and have extended the invitation to potential pilot participants. Unfortunately, the FBI will not be able to pick up the tab for this trip. Let me know if you would like more information.

[Blank]

Take a look at the below email from the FBI which gives us notification of an IP change for the FBI PR transactions. I would assume [Blank] Please advise.
This is the email that I left you a voicemail about. Shout me or if you or have questions. Sorry Brotha.

Due to the merger of BFCON services into the NGI system currently anticipated for June 10, 2012, NGI is requesting IPSFRP User Agencies to make a change to the IP address currently used for FRS/SRB transactions. NGI currently sends and receives FRS/SRB transactions After the implemented change, NGI will send and receive FRS/SRB transactions

Any associated IPSFRP mail server configuration and Firewall configurations will have to be updated to reflect this change in order to successfully communicate upon cutover.

This IP address change must be completed on June 10 for your agency to continue to receive IPSFRP services. The exact time frame for this change on June 10 is between 3:00am-6:00am.

Please direct any questions/concerns regarding this change directly to me.

Unfortunately, the IP address change is unavoidable with the merger of BFCON services to the NGI capabilities. We apologize in advance for any inconvenience this change may cause to your agency.

Good afternoon [redacted]
I was reading your email regarding the FR Pilot project. I never got the FedEx package with the MOU. Can you check to see who signed for the FedEx package and I will hunt it down on this end.

Thanks!

We appreciate all your help and patience forging us through this process. We wish you luck with your future endeavors.

Ladies,

We've recently acquired a new employee in the NGI Program Office named [redacted]. He will now be NM's NGI point of contact and his email address is included above. It has been a pleasure working to get you one small step away from full RISC participation. I've also enjoyed our conversations, meetings, and emails associated with getting you started on the path to participation in our Facial Recognition Pilot. (You should receive the FR Pilot MOU today via Fed-Ex)

Both of these advanced services should keep NM law enforcement at the forefront of biometric utilization.

Take Care,

FBI CJIS Division

FW: NGI Facial Recognition questions South Carolina
Hi

I recently attended the NGI User's Conference in August and I would like to find out more about the NGI Facial Recognition program. SLED currently has a criminal facial recognition system that is used internally by our Fusion center under [redacted]. This system has been extremely beneficial in their department and a federal system will only add to their successes.

During your presentation, the process of bulk photo submissions from states was discussed. [redacted]

The pilot for the NGI system was set for December 2012 (the pilot is tentatively scheduled to start in December 2011 with full operating capability in 2014) with the FBI developed universal face workstation software (UFW to be released summer of 2012) [redacted].

I think the conference call went well yesterday, thanks for setting that up and figuring out how to get Pierce hooked up to the face pilot. As for the MOU we discussed yesterday,

Attached is the "general MOU" for your review. Our AIU and OGC [Redacted] so I encourage not making changes. Let me know if you have any heartburn over it. If not, I will fill it out and send it for signatures. [Redacted] I will need the State Statute or Code that covers Section 3 of the MOU.

I'm out the rest of the week and I know that the WIN conference is going on now so I will try to coordinate a conference call with CJIS, WIN, WSP, PCSD tech staff when I get back.

Thanks for all the help.

FBI-CJIS
Sent via BlackBerry
Yes, thank you. I have been trying to get the attention of my technical staff to explore this further. As I've been saying to [redacted] as much as I support the concept of working with Pierce County to participate in the pilot project, our resources are stretched very thin and it is hard to divert them away from regular operational issues along with big, high profile, projects. I would like to get my folks together with you, Pierce County, and the FBI to discuss to see if this really could be done with minimal effort on our part. I'll hopefully let you know soon.

Just touching base to confirm you received this and if you would like to discuss.
I am sending this to you to think about and discuss internally.

As you are aware, I will attend the WIN Board meeting in Ketchikan this month. One of his responsibilities is to evangelize NGI capabilities. Among them is to follow up on Pierce County's interest in being part of the IPSFRP pilot. To do that, they need a route through the CJIS WAN.
Please let me know if WSP is interested in accommodating Pierce County on this limited duration pilot basis with the described conceptual understanding.

Thanks...........

MEMORANDUM OF UNDERSTANDING

BETWEEN

THE FEDERAL BUREAU OF INVESTIGATION

AND

THE MICHIGAN STATE POLICE

FOR THE

INTERSTATE PHOTO SYSTEM FACIAL RECOGNITION PILOT

GENERAL PROVISIONS

1. PURPOSE: This Memorandum of Understanding (MOU) between the Federal Bureau of Investigation (FBI), Criminal Justice Information Services (CJIS) Division, and the Michigan State Police (MSP), hereinafter referred to as the "Parties," is for the limited purpose of testing and piloting the FBI's Interstate Photo System Facial Recognition Pilot (IPSFRP). This MOU memorializes the Parties' understandings regarding the transmittal, receipt, storage, use, and dissemination of information relating to this piloting initiative.

2. BACKGROUND: The FBI maintains millions of digital representations of fingerprint images, features from digital fingerprint images, and associated criminal history record information in the Integrated Automated Fingerprint Identification System (IAFIS). The IAFIS provides automated fingerprint search capabilities, latent print search capabilities, electronic image storage and electronic exchange of fingerprints, criminal history and associated photos to support law enforcement and authorized civil organizations. Collectively, this data comprises the biometric content, format, and units of measurement for the electronic exchange of information that may be used for positive fingerprint identifications. Given the advances in biometric identification technology, including hardware, software, and digital imaging, it is essential that existing search capabilities be enhanced to meet authorized customer needs. The CJIS Division's Next Generation Identification (NGI) System expects to reduce terrorist and other criminal activities by implementing multiple search capabilities that will improve, expand, or create new biometric identification tools and investigative services for the FBI's user community.

The IPSFRP satisfies a subset of the NGI Interstate Photo System (IPS) requirements, and a prototype system was delivered to assist in the development of the IPS facial recognition system. Upon full implementation, IPS enhancements will: 1) expand storage capacity, thereby allowing a more
robust photo repository; 2) permit photo submissions independent of arrests; 3) permit bulk submission of photos being maintained at state and federal repositories; 4) accommodate the submission and searching of non-facial photos (e.g., Scars, Marks and Tattoos [SMTs]); 5) permit IPS photo retrieval via the National Crime Information Center (NCIC); and 6) provide facial recognition search capabilities.

It is important to note that although facial recognition technology has been under development since the 1960's, universal algorithmic approaches for facial recognition do not exist. Approaches originally tailored to low resolution, two-dimensional images have been improved to account for greater levels of resolution and three-dimensional data. The U.S. Government has performed multiple evaluations of facial recognition technology and preliminary results demonstrate that accuracy has greatly improved. Accordingly, these enhancements support the FBI’s decision to enhance its photo processing capabilities in the early stages of NGI system development, to include facial recognition technology.

To address and enhance photo processing capabilities, the FBI is initiating the IPSFRP as a collaborative effort to identify user needs, provide proof of concept, establish thresholds for lights out searches at the national level and develop a useful investigative tool for the law enforcement community.

Agencies participating in this pilot program have implemented a facial recognition system for investigative, identity authentication and/or tracking purposes. In support of this initiative, the MSP will submit images to a state/regional photo repository and the repository will provide search results to the submitting law enforcement agency. The MSP will also request that the photo submission be forwarded to the CJIS Division, via the CJIS Wide Area Network (WAN) or other FBI approved secure web services, for comparison against the FBI’s national photo repository. This pilot is designed to provide participating law enforcement agencies an automated facial recognition search of a subset of the FBI’s national photo repository until full implementation of the IPS facial recognition search capability in 2014. The IPSFRP will represent a subset of the Interstate Photo System repository and will be expanded and updated periodically throughout the pilot. The subset repository will not represent a real time reflection of the IPS or III photo repository.

Technical specifications for the IPSFRP are derived from the CJIS Electronic Biometric Transmission Specification (EBTS) and the American National Standards Institute (ANSI) American National Standard for Information Systems - Data Format for the Interchange of Fingerprint, Facial, & other Biometric Information.

During the IPSFRP piloting phase, relevant transactions will be analyzed by the Parties and their authorized contractors to assess system performance. In addition, the NGI IPS system design will be recording lessons learned and user input.
System availability will be limited during this initiative. Accordingly, the CJIS Division will provide advanced notice of sporadic system availability, backup recovery limitations, and failover shortfalls during the prototype phase. In addition, the CJIS Division may limit the number of transactions that will be accepted during the pilot phase.

3. AUTHORITY: The FBI enters into this MOU under the statutory authority provided by Title 28, United States Code, § 534.

4. SCOPE: This MOU applies to facial photo images provided by the MSP and the FBI’s responses.

A. The FBI will:

1. Accept one frontal facial photo submission per IPSFRP search request;

2. Search each frontal facial image against the IPSFRP national repository;

3. Provide a candidate list per each applicable IPSFRP search request. The candidate list will contain the agency’s requested number (minimum of 2) of candidates, or a default number (TBD) of candidates if not specified by the agency, as well as a caveat message;

4. Provide a valid FBI identifier for each candidate;

5. Maintain a log of all transactions and disseminations;

6. Designate a point-of-contact (POC) for issues and concerns related to this initiative;

7. Notify the submitting agency if a CJIS facial examiner determines (during post processing) that a probable match between the probe image and a gallery image on the returned candidate list exists; and

B. The MSP will:

1. Submit no more than one frontal facial photo (EBTS - ANSI compliant) per IPSFRP search request via the CJIS WAN or other FBI approved secure web services;

2. Request a specified number (minimum of 2, default of 20, maximum of 50) of returned candidates;

3. Conduct a search of the Interstate Identification Index to ensure information derived from the IPSFRP candidate lists are up-to-date;
4. Disseminate FBI responses to authorized criminal justice recipients as an investigative lead;

5. Provide the CJIS Division with post processing results, such as:
   - Agency identified a subject from the candidate list and what rank.
   - Search resulted in an investigative lead.
   - Search was of no value.

6. Designate a POC for issues and concerns related to this initiative.

5. DISCLOSURE AND USE OF INFORMATION: The IPSFRP pilot search will be limited to authorized criminal justice agencies for criminal justice purposes. The IPSFRP, and the photo search thereof, is considered to be a part of the IAFIS, therefore all CJIS rules regarding access to IAFIS and dissemination/use of FBI provided information will apply. The Parties acknowledge that information involved in this initiative may identify United States persons, whose information is protected by the Privacy Act of 1974, Executive Order 12333, any successor executive order, or other federal authority. Accordingly, all such information will be treated as “law enforcement sensitive” and protected from unauthorized disclosure. Each Party will immediately report to the other Party any instance in which data received from the other Party is used, disclosed, or accessed in an unauthorized manner (including any data losses or breaches).

   Information derived from FBI IPSFRP search requests and resulting responses are to be used only as investigative leads. Though there are expected to be similarities between submitted images and candidate lists, results shall not be considered to be positive identifications nor considered to have active warrants. Although the emerging technology of facial recognition has made great strides over the years, facial recognition initiatives are not deemed to provide positive identifications and the Parties are prohibited from relying solely on IPSFRP search responses as the sole impetus for law enforcement action. Other indicators and factors must be considered by the submitting agency prior to making an identification.

6. FUNDING: There are no reimbursable expenses associated with this level of support. Each Party will fund its own activities unless otherwise agreed to in writing. Expenditures will be subject to budgetary processes and availability of funds and resources pursuant to applicable laws, regulations and policies. The Parties expressly acknowledge that this MOU in no way implies that Congress will appropriate funds for such expenditures.

7. SETTLEMENT OF DISPUTES: Disagreements between the Parties arising under or relating to this MOU will be resolved only by consultation between the Parties and will not be referred to any other person or entity for settlement.
8. SECURITY: It is the intent of the Parties that the transfer of information described under this MOU will be conducted at the unclassified level. Classified information will neither be provided nor generated under this MOU.

9. AMENDMENT and TERMINATION:

   A. All activities under this MOU will be carried out in accordance to the above described provisions.

   B. This MOU may be amended or terminated at any time by the mutual written consent of the Parties' authorized representatives.

   C. Either Party may terminate this MOU upon thirty (30) days written notification to the other Party. Such notice will be the subject of immediate consultation by the Parties to decide upon the appropriate course of action. In the event of such termination, the following rules apply:

      1. The Parties will continue participation, financial or otherwise, up to the effective date of termination.

      2. Each Party will pay the costs it incurs as a result of termination.

      3. All information, copies thereof, and rights therein received under the provisions of this MOU prior to the termination will be maintained in accordance with the receiving Party's practices.

10. ENTRY INTO FORCE, AND DURATION: This MOU, which consists of ten Sections, will enter into effect upon the signature of both Parties, will be reviewed annually to determine whether amendments are needed, and will remain in effect until terminated or completion of the testing and piloting phase. This MOU is not intended, and should not be construed, to create any right or benefit, substantive or procedural, enforceable at law or otherwise by any third party against the Parties, their parent agencies, the United States, or the officers, employees, agents, or other associated personnel thereof.

4/25/11

5-6-11
MEMORANDUM OF UNDERSTANDING

BETWEEN

THE FEDERAL BUREAU OF INVESTIGATION

AND

MARYLAND DEPARTMENT OF PUBLIC SAFETY AND CORRECTIONAL SERVICES
INFORMATION TECHNOLOGY AND COMMUNICATIONS DIVISION

FOR THE

INTERSTATE PHOTO SYSTEM FACIAL RECOGNITION PILOT

GENERAL PROVISIONS

1. PURPOSE: This Memorandum of Understanding (MOU) between the Federal Bureau of Investigation (FBI), Criminal Justice Information Services (CJIS) Division, and the Maryland Department of Public Safety and Correctional Services, Information Technology and Communications Division (DPSCS-ITCD) hereinafter referred to as the "Parties," is for the limited purpose of testing and piloting the FBI's Interstate Photo System Facial Recognition Pilot (IPSFRP). This MOU memorializes the Parties' understandings regarding the transmittal, receipt, storage, use, and dissemination of information relating to this piloting initiative.

2. BACKGROUND: The FBI maintains millions of digital representations of fingerprint images, features from digital fingerprint images, and associated criminal history record information in the Integrated Automated Fingerprint Identification System (IAFIS). The IAFIS provides automated fingerprint search capabilities, latent print search capabilities, electronic image storage and electronic exchange of fingerprints, criminal history and associated photos to support law enforcement and authorized civil organizations. Collectively, this data comprises the biometric content, format, and units of measurement for the electronic exchange of information that may be used for positive fingerprint identifications. Given the advances in biometric identification technology, including hardware, software, and digital imaging, it is essential that existing search capabilities be enhanced to meet authorized customer needs. The CJIS Division's Next Generation Identification (NGI) System expects to reduce terrorist and other criminal activities by implementing multiple search capabilities that will improve, expand, or create new biometric identification tools and investigative services for the FBI's user community.
The IPSFRP satisfies a subset of the NGI Interstate Photo System (IPS) requirements, and a prototype system was delivered to assist in the development of the IPS facial recognition system. Upon full implementation, IPS enhancements will: 1) expand storage capacity, thereby allowing a more robust photo repository; 2) permit photo submissions independent of arrests; 3) permit bulk submission of photos being maintained at state and federal repositories; 4) accommodate the submission and searching of non-facial photos (e.g., Sears, Marks, and Tattoos); 5) permit IPS photo retrieval via the National Crime Information Center; and 6) provide facial recognition search capabilities.

It is important to note that although facial recognition technology has been under development since the 1960's, universal algorithmic approaches for facial recognition do not exist. Approaches originally tailored to low resolution, two-dimensional images have been improved to account for greater levels of resolution and three-dimensional data. The U.S. Government has performed multiple evaluations of facial recognition technology and preliminary results demonstrate that accuracy has greatly improved. Accordingly, these enhancements support the FBI's decision to enhance its photo processing capabilities in the early stages of NGI system development, to include facial recognition technology.

To address and enhance photo processing capabilities, the FBI is initiating the IPSFRP as a collaborative effort to identify user needs, provide proof of concept, establish thresholds for lights out searches at the national level, and develop a useful investigative tool for the law enforcement community.

Agencies participating in this pilot program have implemented a facial recognition system for investigative, identity authentication and/or tracking purposes. In support of this initiative, the DPSCS-ITCD will submit images to a state/regional photo repository and the repository will provide search results to the submitting law enforcement agency. The DPSCS-ITCD will also request that the photo submission be forwarded to the CJIS Division, via the CJIS Wide Area Network (WAN) or other FBI approved secure web services, for comparison against the FBI's national photo repository. This pilot is designed to provide participating law enforcement agencies an automated facial recognition search of a subset of the FBI's national photo repository until full implementation of the IPS facial recognition search capability in 2014. The IPSFRP will represent a subset of the IPS repository and will be expanded and updated periodically throughout the pilot. The subset repository will not represent a real time reflection of the IPS or Interstate Identification Index (III) photo repository.

Technical specifications for the IPSFRP are derived from the CJIS Electronic Biometric Transmission Specification (EBTS) and the American National Standards Institute (ANSI) American National Standard for Information Systems - Data Format for the Interchange of Fingerprint, Facial, & other Biometric Information.
During the IPSFRP piloting phase, relevant transactions will be analyzed by the Parties and their authorized contractors to assess system performance. In addition, the NGI IPS system design will be recording lessons learned and user input.

System availability will be limited during this initiative. Accordingly, the CJIS Division will provide advanced notice of sporadic system availability, backup recovery limitations, and failover shortfalls during the prototype phase. In addition, the CJIS Division may limit the number of transactions that will be accepted during the pilot phase.

3. AUTHORITY: The FBI enters into this MOU under the statutory authority provided by Title 28, United States Code, § 534.

4. SCOPE: This MOU applies to facial photo images provided by the DPSCS-ITCD and the FBI's responses.

A. The FBI will:

1. Accept one frontal facial photo submission per IPSFRP search request;

2. Search each frontal facial image against the IPSFRP national repository;

3. Provide a candidate list per each applicable IPSFRP search request. The candidate list will contain the agency's requested number (minimum of 2) of candidates, or a default number of 20 candidates if not specified by the agency, as well as a caveat message;

4. Provide a valid FBI identifier for each candidate;

5. Maintain a log of all transactions and disseminations;

6. Designate a point-of-contact (POC) for issues and concerns related to this initiative;

7. Notify the submitting agency if a CJIS facial examiner determines (during post processing) that a probable match between the probe image and a gallery image on the returned candidate list exists; and

B. The DPSCS-ITCD will:

1. Submit no more than one frontal facial photo (EBTS - ANSI compliant) per IPSFRP search request via the CJIS WAN or other FBI approved secure web services;

2. Request a specified number (minimum of 2, default of 20, maximum of 50) of returned candidates;
3. Conduct a search of the III to ensure information derived from the IPSFRP candidate lists are up-to-date;

5. Disseminate FBI responses to authorized criminal justice recipients as an investigative lead;

   A. Provide the CJIS Division with post processing results, such as:
      1. Agency identified a subject from the candidate list and what rank.
      2. Search resulted in an investigative lead.
      3. Search was of no value.

   B. Designate a POC for issues and concerns related to this initiative.

6. DISCLOSURE AND USE OF INFORMATION: The IPSFRP pilot search will be limited to authorized criminal justice agencies for criminal justice purposes. The IPSFRP, and the photo search thereof, is considered to be a part of the IAFIS, therefore all CJIS rules regarding access to IAFIS and dissemination/use of FBI provided information will apply. The Parties acknowledge that information involved in this initiative may identify United States persons, whose information is protected by the Privacy Act of 1974, Executive Order 12333, any successor executive order, or other federal authority. Accordingly, all such information will be treated as “law enforcement sensitive” and protected from unauthorized disclosure. Each Party will immediately report to the other Party any instance in which data received from the other Party is used, disclosed, or accessed in an unauthorized manner (including any data losses or breaches).

   Information derived from the FBI IPSFRP search requests and resulting responses are to be used only as investigative leads. Though there are expected to be similarities between submitted images and candidate lists, results shall not be considered to be positive identifications nor considered to have active warrants. Although the emerging technology of facial recognition has made great strides over the years, facial recognition initiatives are not deemed to provide positive identifications and the Parties are prohibited from relying solely on IPSFRP search responses as the sole impetus for law enforcement action. Other indicators and factors must be considered by the submitting agency prior to making an identification.

7. FUNDING: There are no reimbursable expenses associated with this level of support. Each Party will fund its own activities unless otherwise agreed to in writing. Expenditures will be subject to budgetary processes and availability of funds and resources pursuant to applicable laws, regulations and policies. The Parties expressly acknowledge that this MOU in no way implies that Congress will appropriate funds for such expenditures.
8. SETTLEMENT OF DISPUTES: Disagreements between the Parties arising under or relating to this MOU will be resolved only by consultation between the Parties and will not be referred to any other person or entity for settlement.

9. SECURITY: It is the intent of the Parties that the transfer of information described under this MOU will be conducted at the unclassified level. Classified information will neither be provided nor generated under this MOU.

10. AMENDMENT and TERMINATION:

A. All activities under this MOU will be carried out in accordance to the above described provisions.

B. This MOU may be amended or terminated at any time by the mutual written consent of the Parties' authorized representatives.

C. Either Party may terminate this MOU upon thirty (30) days written notification to the other Party. Such notice will be the subject of immediate consultation by the Parties to decide upon the appropriate course of action. In the event of such termination, the following rules apply:

1. The Parties will continue participation, financial or otherwise, up to the effective date of termination.

2. Each Party will pay the costs it incurs as a result of termination.

3. All information, copies thereof, and rights therein received under the provisions of this MOU prior to the termination will be maintained in accordance with the receiving Party's practices.

11. ENTRY INTO FORCE, AND DURATION: This MOU, which consists of eleven Sections, will enter into effect upon the signature of both Parties, will be reviewed annually, on or prior to the anniversary date, to determine whether amendments are needed, and will remain in effect until terminated or completion of the testing and piloting phase. This MOU is not intended, and should not be construed, to create any right or benefit, substantive or procedural, enforceable at law or otherwise by any third party against the Parties, their parent agencies, the United States, or the officers, employees, agents, or other associated personnel thereof.
The preceding eleven (11) sections represent the understandings reached between the FBI and the DPSCS-ITCD.

THE STATE OF HAWAII DEPARTMENT OF THE ATTORNEY GENERAL

FOR THE

INTERSTATE PHOTO SYSTEM FACIAL RECOGNITION PILOT

GENERAL PROVISIONS

1. PURPOSE: This Memorandum of Understanding (MOU) between the Federal Bureau of Investigation (FBI), Criminal Justice Information Services (CJIS) Division, and the State of Hawaii Department of the Attorney General (HDAG), hereinafter referred to as the "Parties," is for the limited purpose of testing and piloting the FBI's Interstate Photo System Facial Recognition Pilot (IPSFRP). This MOU memorializes the Parties' understandings regarding the transmittal, receipt, storage, use, and dissemination of information relating to this piloting initiative.

2. BACKGROUND: The FBI maintains millions of digital representations of fingerprint images, features from digital fingerprint images, and associated criminal history record information in the Integrated Automated Fingerprint Identification System (IAFIS). The IAFIS provides automated fingerprint search capabilities, latent print search capabilities, electronic image storage and electronic exchange of fingerprints, criminal history and associated photos to support law enforcement and authorized civil organizations. Collectively, this data comprises the biometric content, format, and units of measurement for the electronic exchange of information that may be used for positive fingerprint identifications. Given the advances in biometric identification technology, including hardware, software, and digital imaging, it is essential that existing search capabilities be enhanced to meet authorized customer needs. The CJIS Division's Next Generation Identification (NGI) System expects to reduce terrorist and other criminal activities by implementing multiple search capabilities that will improve, expand, or create new biometric identification tools and investigative services for the FBI's user community.

The IPSFRP satisfies a subset of the NGI Interstate Photo System (IPS) requirements, and a prototype system was delivered to assist in the development of the IPS facial recognition system. Upon full implementation, IPS enhancements will: 1) expand storage capacity, thereby allowing a more robust photo repository; 2) permit photo submissions independent of arrests; 3)
It is important to note that although facial recognition technology has been under development since the 1960's, universal algorithmic approaches for facial recognition do not exist. Approaches originally tailored to low resolution, two-dimensional images have been improved to account for greater levels of resolution and three-dimensional data. The U.S. Government has performed multiple evaluations of facial recognition technology and preliminary results demonstrate that accuracy has greatly improved. Accordingly, these enhancements support the FBI’s decision to enhance its photo processing capabilities in the early stages of NGI system development, to include facial recognition technology.

To address and enhance photo processing capabilities, the FBI is initiating the IPSFRP as a collaborative effort to identify user needs, provide proof of concept, establish thresholds for lights out searches at the national level and develop a useful investigative tool for the law enforcement community.

Agencies participating in this pilot program have implemented a facial recognition system for investigative, identity authentication and/or tracking purposes. In support of this initiative, the HDAG will submit images to a state/regional photo repository and the repository will provide search results to the submitting law enforcement agency. The HDAG will also request that the photo submission be forwarded to the CJIS Division, via the CJIS Wide Area Network (WAN) or other FBI approved secure web services, for comparison against the FBI’s national photo repository. This pilot is designed to provide participating law enforcement agencies an automated facial recognition search of a subset of the FBI’s national photo repository until full implementation of the IPS facial recognition search capability in 2014. The IPSFRP will represent a subset of the IPS repository and will be expanded and updated periodically throughout the pilot. The subset repository will not represent a real time reflection of the IPS or Interstate Identification Index (III) photo repository.

Technical specifications for the IPSFRP are derived from the CJIS Electronic Biometric Transmission Specification (EBTS) and the American National Standards Institute (ANSI) American National Standard for Information Systems - Data Format for the Interchange of Fingerprint, Facial, & other Biometric Information.

During the IPSFRP piloting phase, relevant transactions will be analyzed by the Parties and their authorized contractors to assess system performance. In addition, the NGI IPS system design will be recording lessons learned and user input.
System availability will be limited during this initiative. Accordingly, the CJIS Division will provide advanced notice of sporadic system availability, backup recovery limitations, and failover shortfalls during the prototype phase. In addition, the CJIS Division may limit the number of transactions that will be accepted during the pilot phase.

3. AUTHORITY: The FBI enters into this MOU under the statutory authority provided by Title 28, United States Code, § 534.

4. SCOPE: This MOU applies to facial photo images provided by the HDAG and the FBI’s responses.

   A. The FBI will:

   1. Accept one frontal facial photo submission per IPSFRP search request;

   2. Search each frontal facial image against the IPSFRP national repository;

   3. Provide a candidate list per each applicable IPSFRP search request. The candidate list will contain the agency’s requested number (minimum of 2) of candidates, or a default number of 20 candidates if not specified by the agency, as well as a caveat message;

   4. Provide a valid FBI identifier for each candidate;

   5. Maintain a log of all transactions and disseminations;

   6. Designate a point of contact (POC) for issues and concerns related to this initiative;

   7. Conduct post processing on submitted transactions to determine system performance and miss analysis and provide results to the submitting agency; and

   B. The HDAG will:

   1. Submit no more than one frontal facial photo (EBTS - ANSI compliant) per IPSFRP search request via the CJIS WAN or other FBI approved secure web services;

   2. Request a specified number (minimum of 2, default of 20, maximum of 50) of returned candidates;
5. Disseminate FBI responses to authorized criminal justice recipients as an investigative lead;

   A. Provide the CJIS Division with post processing results, such as:
   1. Agency identified a subject from the candidate list and what rank.
   2. Search resulted in an investigative lead.
   3. Search was of no value.

   B. Designate a POC for issues and concerns related to this initiative.

6. DISCLOSURE AND USE OF INFORMATION: The IPSFRP pilot search will be limited to authorized criminal justice agencies for criminal justice purposes. The IPSFRP, and the photo search thereof, is considered to be a part of the IAFIS, therefore all CJIS rules regarding access to IAFIS and dissemination/use of FBI provided information will apply. The Parties acknowledge that information involved in this initiative may identify United States persons, whose information is protected by the Privacy Act of 1974, Executive Order 12333, any successor executive order, or other federal authority. Accordingly, all such information will be treated as “law enforcement sensitive” and protected from unauthorized disclosure. Each Party will immediately report to the other Party any instance in which data received from the other Party is used, disclosed, or accessed in an unauthorized manner (including any data losses or breaches).

   Information derived from the FBI IPSFRP search requests and resulting responses are to be used only as investigative leads. Though there are expected to be similarities between submitted images and candidate lists, results shall not be considered to be positive identifications nor considered to have active warrants. Although the emerging technology of facial recognition has made great strides over the years, facial recognition initiatives are not deemed to provide positive identifications and the Parties are prohibited from relying solely on IPSFRP search responses as the sole impetus for law enforcement action. Other indicators and factors must be considered by the submitting agency prior to making an identification.

7. FUNDING: There are no reimbursable expenses associated with this level of support. Each Party will fund its own activities unless otherwise agreed to in writing. Expenditures will be subject to budgetary processes and availability of funds and resources pursuant to applicable laws, regulations and policies. The Parties expressly acknowledge that this MOU in no way implies that Congress or the State of Hawaii will appropriate funds for such expenditures.
this MOU will be resolved only by consultation between the Parties and will not be referred to any other person or entity for settlement.

9. SECURITY: It is the intent of the Parties that the transfer of information described under this MOU will be conducted at the unclassified level. Classified information will neither be provided nor generated under this MOU.

10. AMENDMENT and TERMINATION:

   A. All activities under this MOU will be carried out in accordance to the above described provisions.

   B. This MOU may be amended or terminated at any time by the mutual written consent of the Parties' authorized representatives.

   C. Either Party may terminate this MOU upon thirty (30) days written notification to the other Party. Such notice will be the subject of immediate consultation by the Parties to decide upon the appropriate course of action. In the event of such termination, the following rules apply:

      1. The Parties will continue participation, financial or otherwise, up to the effective date of termination.

      2. Each Party will pay the costs it incurs as a result of termination.

      3. All information, copies thereof, and rights therein received under the provisions of this MOU prior to the termination will be maintained in accordance with the receiving Party's practices.

11. ENTRY INTO FORCE, AND DURATION: This MOU, which consists of ten Sections, will enter into effect upon the signature of both Parties, will be reviewed annually, on or prior to the anniversary date, to determine whether amendments are needed, and will remain in effect until terminated or completion of the testing and piloting phase. This MOU is not intended, and should not be construed, to create any right or benefit, substantive or procedural, enforceable at law or otherwise by any third party against the Parties, their parent agencies, the United States, or the officers, employees, agents, or other associated personnel thereof.
The preceding ten (10) sections represent the understandings reached between the FBI and the Hawaii Criminal Justice Data Center.
