Targeted consultation addressed to the participants to the stakeholder dialogue on Article 17 of the Directive on Copyright in the Digital Single Market

Fields marked with * are mandatory.

INTRODUCTION

The Directive on Copyright in the Digital Single Market (Directive 2019/790/EC, the ‘DSM Directive’) requires the Commission to issue guidance on the application of Article 17, in particular regarding the cooperation between online content-sharing service providers and rightholders. The guidance should take into account the discussions held during the stakeholder dialogue meetings organised by the Commission pursuant to paragraph 10 of that article. The DSM Directive is addressed to the Member States who are required to transpose it by 7 June 2021. At this stage, the guidance will focus on assisting Member States in that task.

Following an open call for interest to participate in the stakeholder dialogue, the Commission organised six stakeholder dialogue meetings between October 2019 and February 2020 to gather the views of relevant stakeholders on the main topics related to the application of Article 17.

This consultation paper builds on the discussions at the stakeholder dialogue and presents the initial views of the Commission services with the view to finalising the Commission guidance.

We encourage the representative organisations to gather the views of their members and to provide, to the extent possible, a coordinated reply to the consultation. Where this is not possible, replies can be provided by individual members.

I. SCOPE OF SERVICES COVERED BY ARTICLE 17

Background

Article 17 applies to online content-sharing service providers as defined in Article 2(6) of the Directive. An online content-sharing service provider is defined as an information society service provider of which the main or one of the main purposes is to store and give the public access to a large amount of copyright-protected works or other protected subject matter uploaded by its users, which it organises and promotes for profit-making purposes.

Article 2(6) also provides a non-exhaustive list of excluded providers of services, which are not online content-sharing service providers within the meaning of the Directive.

Special rules apply to new online content-sharing service providers, which meet the conditions in Article 17 (6).

Possible elements for the guidance

The guidance should indicate how to transpose the definition of 'online content-sharing service provider' into national law and explain the different elements of the definition itself, as well as of the list of service
providers, which are expressly excluded.

The non-exhaustive nature of the exclusion for particular online service providers by use of the term ‘such as’ denotes that other service providers could also qualify as an excluded service provider on a case-by-case basis.

In order to provide legal certainty, Member States should explicitly set out in their implementing laws all elements of the definition of ‘online content-sharing service provider’ in Article 2(6), including the excluded service providers set out in Article 2(6). As regards these excluded service providers, the guidance should state that the Union legislature has expressly excluded from the scope of the definition the particular examples set out in Article 2(6).

For other services, which are not identified as examples but which may also be excluded, a case-by-case assessment would be necessary.

Recital 63 states that a case-by-case assessment would be required in order to determine whether an online service provider falls within the scope of the rules in Article 17. This does not affect the possible application of Article 3(1) and (2) of Directive 2001/29/EC to excluded service providers using copyright-protected content, as recalled by recital 64.

Article 2(6) should be read in the light of recitals 62 and 63. It order to increase legal certainty as to the scope and as an aid to interpretation, Member States should be advised to also transpose elements of Recitals 62 and 63. Member States should apply the different elements of the definition, such as the concept of ‘large amount of copyright protected content’ in the light of these recitals, while they should refrain from further defining these elements going beyond the text of the directive, in order to avoid fragmentation.

Member States should bear in mind that the definition is drafted in a sufficiently neutral manner, which takes account of possible changes in modes of delivery, technology and usage and the fact that the DSM Directive will have to be applied in circumstances, which may change over time.

**Question 1:** Are there any additional elements related to the definition of an online content-sharing service provider, besides those outlined above, which you consider require some guidance? If yes, please indicate which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

EFF supports the clarification that the list of the exclusion for particular online service providers is a non-exhaustive one, meaning that other services providers may also qualify as an excluded service provider on a case-by-case basis. We recommend suggesting the introduction of a flexible review mechanism to update the list in light of future technological developments.

We also recommend to clarify, in line with Recital 62, that the definition of an online content-sharing service provider should target only online services that “compete with other online content services”. In addition, it should be added that, in line with the legislative purpose, the ‘not for profit’ criterion should be interpreted broadly.

**II. AUTHORISATIONS (Art. 17 (1-2))**
**Background**

Article 17(1) requires Member States to provide that online content-sharing service providers, as defined in Article 2(6), perform an act of communication to the public or an act of making available to the public for the purposes of this Directive when they give the public access to protected content uploaded by their users and therefore need to obtain an authorisation from relevant rightholders, for instance by concluding a licensing agreement. Under Article 17(2) the authorisation obtained by the online content-sharing service providers must also cover the acts carried out by users, under certain conditions.

**Possible elements for the guidance**

(i) Authorisation models

The guidance should explain how Member States should approach the requirement of ‘authorisation’ in Article 17(1). The term ‘authorisation’ is not defined and it should be interpreted in the light of the aim and objective of Article 17.

Article 17 is a lex specialis to Article 3 of Directive 2001/29/EC and of Article 14 of Directive 2000/31/EC. This is confirmed by Recital 64, which states clearly that Article 17 does not affect the concept of communication to the public or of making available to the public elsewhere under Union law, nor does it affect the possible application of Article 3(1) and (2) of Directive 2001/29/EC to other service providers using copyright-protected content. As such, Member States would not be able to rely in their transposition of Article 17 on their implementation of either of those directives in relation either to the notion of ‘authorisation’ or indeed for the notion of ‘communication to the public’. Therefore, Member States should explicitly introduce into national law the notion of ‘authorisation’ for the lex specialis ‘act of communication to the public’ in Article 17(1).

Article 17(1) provides that an authorisation may for instance include a licensing agreement and this is also set out in Recital 64. Accordingly, an authorisation may take the form of a licensing agreement but may also take another form in national law. The guidance could give indications of different authorisation schemes that Member States could provide for, taking into account the specificities and practices of different sectors. Both individual and collective licensing solutions should be possible. Extended collective licences (ECL) could be considered in specific cases and for specific sectors, provided that they comply with the conditions of Article 12 of the DSM Directive.

The guidance would also recall that rightholders are not obliged to grant an authorisation to online content-sharing service providers, as explained in recital 61. Nevertheless, where rightholders do not grant an authorisation, online content-sharing service providers are not liable for copyright infringements if they comply with the conditions set out in Article 17(4) (see section III.1).

In order to foster the grant of authorisations in any chosen form at national level and to ensure the *effet utile* of Article 17(1), Member States could be recommended to maintain or establish voluntary mechanisms to facilitate agreements between rightholders and service providers. For example, voluntary mediation mechanisms could be considered in specific cases or sectors to support parties willing to reach an agreement but facing difficulties in the negotiations.

(ii) Authorisations covering users
Member States should implement explicitly in their legislation Article 17(2) under which an authorisation granted to online content-sharing service providers should also cover acts carried out by (i) users acting for non-commercial purposes or (ii) users whose activity does not generate significant revenues. It is important to bear in mind that these authorised uses are in addition to what else is authorised for content-sharing service providers.

Under this provision, authorisations granted to service providers are deemed to cover the acts, within the material scope of the authorisation granted, that are carried out by users falling in any one of these categories (non-commercial purpose or non-significant revenues). It is sufficient for a user to satisfy one of these conditions to be covered by the authorisation.

The guidance could illustrate this provision, which would for example cover users uploading a home video including music in the background or users uploading a tutorial generating limited revenues, which includes music or images when no exceptions apply. On the other hand, users acting on a commercial basis and deriving significant revenues from their uploads would be outside the scope of or not covered by that authorisation (unless the parties have explicitly agreed to cover also these users contractually). Member States should not set out quantitative thresholds when implementing the concept of ‘significant revenues’ which should be examined on a case-by-case basis. Member States should be recommended to assess the notion of ‘significant revenue’ by reference to all the circumstances of the user’s activity in question, including whether there is a licence agreement where the parties have agreed on specific thresholds (which should however not go below what is authorised under Article 17(2)).

Member States should interpret the notion of authorisation in Article 17(2) in light of recital 69 according to which service providers do not have to obtain a separate authorisation when rightholders have already authorised users to upload specific content. In these cases, the act of communication to the public has already been authorised within the scope of the authorisation granted to the user. The same recital also indicates that service providers should not presume that their users have in all cases obtained all the necessary authorisations for the content they upload.

In order to enhance transparency and legal certainty, the guidance could encourage the Member States to put in place an exchange of information on authorisations between rightholders, users and service providers.

*Question 2: Are there any additional elements related to authorisations under Article 17(1) and 17(2), which should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.*

2600 character(s) maximum
EFF agrees with the analysis that Article 17 C-DSM constitutes a lex specialis to the provisions of the InfoSoc Directive. This reading is supported by systematic arguments and in line with the recent opinion by AG Saugmandsgaard Øe to the joint Cases C-682/18 and C-683/18. Hence whilst rightholders have no obligation to grant authorisations, the fact they do not grant one also means that online content-sharing service providers are not liable for copyright infringements if they comply with the conditions set out in Article 17(4).

We suggest clarifying that Member States have sufficient leeway to introduce remunerated exceptions, for example as proposed by the GER Ministry of Justice. Our reply to the GER consultation can be accessed here: https://www.eff.org/document/eff-opinion-ger-implementation-art-17-c-dsm

**Question 3: Do you have any concrete suggestions on how to ensure a smooth exchange of information between rightholders, online content-sharing service providers and users on authorisations that have been granted?**

2600 character(s) maximum

### III. SPECIFIC LIABILITY REGIME UNDER ARTICLE 17

Article 17(4) establishes a specific liability regime for online content-sharing service providers that have not obtained an authorisation from the relevant rightholders under the applicable national rules implementing Article 17(1). Therefore, the *effet utile* of this provision will depend on the system of ‘authorisation’ put in place by the Member State under Article 17 (1) and (2). As outlined in recital 61, the goal of Article 17 is ‘to foster the development of the licensing market between rightholders and online content-sharing service providers’. Article 17(4) only becomes applicable in those cases in which the primary goal of authorisation of acts of communication to the public performed by online content sharing service providers within the meaning of Article 17(1), for instance by concluding a licensing agreement, could not be achieved.

In the absence of an authorisation, Article 17(4) sets out three cumulative conditions, which service providers may invoke as a defence against liability.

The conditions in Article 17(4) are subject to the principle of proportionality, as specified in Article 17(5). In this respect, the guidance should give indications to Member States on the practical application of the proportionality criteria to the conditions set in Article 17(4), notably how the type, size and audience of the service, the availability of suitable and effective means and the related costs, as well as the type of content uploaded by the users could be considered in different cases.

#### 1. BEST EFFORTS TO OBTAIN AN AUTHORISATION (ARTICLE 17(4)(a))

**Background**

The first condition in Article 17(4) letter (a) is that service providers should be liable for unauthorised acts of communication to the public, including acts of making available to the public, unless they demonstrate they have made best efforts to obtain an authorisation. The principle of proportionality, as set out in Article 17(5),
should be taken into account when assessing whether a service has made its best efforts under Article 17 (4) letter (a). Pursuant to Article 17(8), the application of Article 17 should not lead to any general monitoring obligation.

Possible elements for the guidance:

The guidance could give non-exhaustive indications of actions carried out by service providers that could constitute best efforts to obtain an authorisation by the service providers. In particular, it should illustrate, which action on the part of service providers would constitute best efforts. This would include any action taken by service providers to seek out and/or engage with rightholders and the response, if any, to such solicitation and/or engagement by rightholders. Member States may wish to include such actions, which could, if relevant, vary from sector to sector, in their transposition law.

The authorisation models defined by Member States pursuant to Article 17(1) will have an impact on how easily service providers may be able to fulfil the requirement of ‘best efforts’ to obtain an authorisation. The threshold of ‘best efforts’ may be more easily satisfied where a Member State has taken measures to facilitate the grant of authorisations, for example with regard to licensing models, mediation mechanisms or exchange of information. Where a Member State has opted for a system, which leaves greater flexibility in the authorisation regime, service providers may need to adduce evidence that they have tried and been unable to get an authorisation. Keeping records of service providers’ engagement with rightholders may help addressing this situation. The evidential standard to prove best efforts would depend therefore on the type of authorisation in national law. For example, participation in a voluntary mediation, where available, could be taken into account in order to satisfy best efforts.

The guidance should recall the importance of applying the best efforts obligation on a case-by-case basis and according to the proportionality principle and the criteria provided for in Article 17(5).

To illustrate the best effort obligation, the guidance should make clear that service providers have to engage proactively as a minimum with rightholders which can be easily identified and located, in order to seek an authorisation. This includes rightholders representing a broad catalogue of works or other subject matter, or their representatives with a mandate to act on their behalf such as collective management organisations (CMOs) acting in accordance with Directive 2014/26/EU.

At the same time, in accordance with the principle of proportionality, service providers should not be expected to proactively seek out all rightholders whose content may be uploaded on their services, in particular those who are not easily identifiable by any reasonable standard. The guidance should however explain that online content-sharing service providers should as a rule enter into negotiations with those rightholders that wish to offer an authorisation for their content, irrespective of whether their type of content (eg. music, audio-visual content, images, text, etc...) is prevalent or is less common on the website of the service provider. Nevertheless, pursuant to the principle of proportionality, in certain cases (notably in case of smaller service providers) a lower level of effort to obtain an authorisation may be expected for types of content which are less common on the website of a given service provider (e.g. for images or texts on a video-sharing platform).

In the light of Recital 61, licensing agreements should be fair and keep a reasonable balance between both parties. That recital also states that rightholders should receive appropriate remuneration for the use of their works or other subject matter. As a consequence, service providers refusing to conclude a licence offered on fair terms and which maintains a reasonable balance between the parties should not be
considered to have deployed their best efforts to obtain an authorisation. On the other hand, service providers should not be required to accept licensing offers that are not on fair terms and which do not keep a balance between the parties, including as regards the remuneration to be paid.

The guidance should refer to the relevant provisions of Directive 2014/26/EU applying to licences negotiated and concluded by CMOs, in particular Article 16 (conducts of negotiations and licencing terms) and Article 35 (resolution of disputes). As mentioned under Section II, Member States may also maintain or establish voluntary mechanisms aimed at facilitating the conclusion of licensing agreements between online content-sharing service providers and rightholders.

Question 4: In which cases would you consider that an online content-sharing service provider has made its best efforts to obtain an authorisation, in light of the principle of proportionality? Please give some concrete examples, taking into account the principle of proportionality.

The Guidance should explain that the term “best efforts” is a term of art and must be interpreted as such. The best efforts-criterion is not an obligation to deliver an outcome, but it is a due diligence duty to seek to ensure an outcome in light of the principles of proportionality and user rights protections.

It is also important to clarify that Article 17 is based on the assumption that OCSSPs benefit from the upload of copyright-protected content by users and should therefore be obliged to make best efforts to obtain an authorization. This view is debatable, but nevertheless, the Guidance should make clear that the best-efforts criterion only applies to types of works that are typically uploaded to the relevant platform. OCSSPs should never be obliged to make best efforts to obtain an authorization for content that is not typically uploaded to the service, even when actively approached by a rightholder.

Question 5: In your view, how should online content-sharing service providers, in particular smaller service providers, make their best efforts to obtain an authorisation for content, which is less common on their service?

Smaller companies play an important role today in the EU tech ecosystem. There are national alternatives to Instagram, Google, and Facebook that outperform U.S. Big Tech in their countries of origin. The Guidance document should focus on how to safeguard the diversity of platforms in light of the principle of proportionality and the telos of Art 17.

Question 6: Are there any additional elements related to Article 17(4)(a), which should be covered by the guidance besides those outlined above? If yes, please explain which ones and how you consider the guidance should address them.

2. ‘BEST EFFORTS’ TO AVOID UNAUTHORISED CONTENT (Art. 17(4)(b))

Background

The second condition set out in Article 17(4) is that online content-sharing service providers should be
liable for the use of unauthorised content unless they demonstrate that they have made their best efforts, in accordance with high industry standards of professional diligence, to ensure the unavailability of specific works and other subject matter for which the rightholders have provided them with the relevant and necessary information. The principle of proportionality, as set out in Article 17(5), and Article 17(7) should be taken into account. Pursuant to Article 17(8), the application of Article 17 should not lead to any general monitoring obligation.

**Possible elements for the guidance:**

Member States should bear in mind that these provisions are subject to the obligation on them in Article 17 (7) and (9) to ensure that legitimate uses remain unaffected by the cooperation of service providers with rightholders. The guidance should give indications to Member States on how this could be achieved, as explained in section IV.

The guidance should recommend that in their implementing laws Member States should not mandate the use of technology or impose any specific technological solutions on service providers in order to demonstrate best efforts. This would not only ensure a technologically neutral and future proof application of Article 17(4)(b) but also provide for a less intrusive approach. The service providers together with rightholders may cooperate on the best way to approach identification of the works in question, including by recourse to technology taking into account that the cooperation should not lead to any general monitoring obligation.

The guidance should underline that service providers have to act diligently when making their best efforts to implement any relevant solutions. As stated in Recital 66, to assess whether a given service provider has made its best efforts, account should be taken of whether the service provider has taken all the steps that would be taken by a diligent operator to achieve the result of preventing the availability of unauthorised works or other subject matter on its website taking into account best industry practices and the effectiveness of the steps taken in light of all relevant factors and developments. However, service providers should remain free to choose the technology or the solution that they consider the most appropriate to comply with the best efforts obligation in their specific situation, given that account should be taken of the principle of proportionality.

The stakeholder dialogue showed that content recognition technology is already used today to manage the use of copyright protected content, at least by the major online content-sharing service providers. Besides content recognition technology based on fingerprinting, other solutions, such as watermarking, solutions based on metadata and key word search or a combination of different technologies are currently deployed to detect unauthorised content.

Therefore, in most cases, it is expected that service providers will rely (or continue to rely) on technological tools in order to comply with their obligation under Article 17(4)(b) but it is not a prerequisite for the application of Article 17(4). The guidance should in this context recall that the deployment of any solution, including use of technology, such as content recognition technologies, has to respect Article 17(7) and 17 (9), which lays down safeguards for legitimate uses (see section IV below).

The guidance should also recall the importance of applying the ‘best effort’ obligation on a case-by-case basis and according to the proportionality principle and the criteria provided for in Article 17(5). In this respect, the guidance should give indications to Member States along the following lines:
- The type, size and audience of the service: larger service providers with a significant audience may be expected to deploy more advanced and costly solutions/technologies than ‘smaller’ service providers, with more limited audiences and resources. It could be more proportionate to expect smaller service providers to resort to simpler solutions (like metadata or key word search) as long as these solutions are effective. In some cases, notably for small service providers, relying on ex post action following rightholders’ notifications (notice and take down) may be proportionate, as explained in recital 66.

- The availability of suitable and effective means and the related costs should also be considered, for example when service providers buy solutions from third parties/technology providers, when these are developed in-house as well as the costs related to human review in the context of disputes (see Section IV). The cumulative cost of different solutions that may need to be implemented by a service provider should also be considered, as well as limitations of technologies depending on the type of content.

- The type of content uploaded by the users: when a service provider makes available different types of content, the level of efforts to be made may vary depending on whether the content is prevailing in their website or residual. It can be expected that service providers make more efforts regarding the former as compared to the latter.

In line with Article 17(4)(b), the guidance should underline that the best efforts to ensure the unavailability of specific unauthorised content are to be assessed on the basis of the ‘relevant and necessary information’ rightholders must provide to online content-sharing service providers. Whether any information provided by rightholders is “relevant and necessary information” in any given situation should be assessed on a case-by-case basis. Recital 66 specifies that if no such information is provided by rightholders, service providers are not liable for unauthorised uploads of unidentified content.

The guidance would provide some examples of what may constitute relevant and necessary information in different cases. Such information will vary depending on the solutions deployed by service providers (for example metadata on the work such as title, author/producer, duration; fingerprints or the actual content file). The information provided by rightholders should be relevant and accurate to allow service providers to take action on that basis. Member States should be free to define sanctions for abuse of the cooperation mechanism laid down in Article 17, such as the provision of false information.

Flexibility could be left to rightholders and service providers to agree on mutually convenient cooperation arrangements in view of ensuring the unavailability of unauthorised content, within the boundaries of the safeguards for legitimate uses.

**Question 7: In which cases would you consider that an online content-sharing service provider has or has not made its best efforts to ensure the unavailability of specific unauthorised content in accordance with high industry standards of professional diligence and in light of the principle of proportionality and the user safeguards enshrined in Article 17(7) and (9)? Please give some concrete examples.**

2600 character(s) maximum
EFF fully agrees that the Guidance should recommend that in their implementing laws Member States should not mandate the use of technology or impose any specific technological solutions on service providers in order to demonstrate best efforts. However, we have serious doubts about the compatibility of Art 17 with the Charter of Fundamental Rights, especially as regards the liability for copyright infringements when an OCSSP has failed to make best efforts to ensure the unavailability of specific infringing content. The CJEU has grounded the ban on general monitoring in the Charter (see cases C-70/10 Scarlet and C-360/10 Netlog) and found that an obligation to monitor all user uploads for a possible copyright infringement constitutes a general monitoring obligation, even when the service provider is only required to monitor for infringement of a single, specific copyright-protected work (see case C-484/14 McFadden). Further, a Union act must not leave the protection of fundamental rights to the implementation by Member States but must itself include specific fundamental rights safeguards.

In any case, we strongly suggest that the Guidance should clarify the need to ensure the avoidance of general user (content) monitoring. It should be spelled out that the implementation of the best-efforts criterion should never lead to the adoption of upload filters and hence general monitoring of user content, as prohibited by para 8 C-DSM and Article 15 ECD.

We support the conclusion that “best efforts” are to be assessed on a case-by-case basis, but recommend to be more outspoken as to the current tools used by online platforms to identify potentially infringing content.

We also caution against the statements that “content recognition technology is already used today to manage the use of copyright protected content” and that it “is expected that service providers will rely (or continue to rely) on technological tools in order to comply with their obligation under Article 17(4)(b)”. The use of such technology is not a prerequisite for the application of Article 14(4) and “cannot assess whether the uploaded content is infringing or covered by a legitimate use”. Thus it seems likely that automated technologies to detect and remove content based on rightsholder information are not in line with the balance sought by Article 17, in particular the safeguarding of legitimate uses and the respect for data protection. The Guidance should emphasize the duty of Member States to ensure compliance of platforms with these principles.

Question 8: Which information do you consider ‘necessary and relevant’ in order for online content-sharing service providers to comply with the obligation set out in Article 17(4)(b)?

As highlighted by the Advocate General (AG) in his opinion on the joined cases YouTube (C-682/18) and Cyando (C-683/18), in order for a service provider to be able to determine the infringing nature of a specific use, the rightsholder must provide, at minimum, information identifying the protected work or other protected subject-matter, establishing that it fulfills the criteria for copyright or related rights protection, information on the specific rights held by the rightholder in the content, including the territorial scope of those rights, as well as information establishing that the use in question infringes those rights, including why the rightholder considers that exceptions do not apply (paras 187 to 190). Information on the infringing nature of the use, however, cannot be provided ex ante and in abstracto, without the rightsholder knowing the use in question. Therefore, “necessary and relevant information” must refer to a dialogue between the service provider and the rightsholder, rather than a one-off information provision by the rightsholder, and include all the information listed above.
3. NOTICES SUBMITTED BY RIGHThOLDERS TO REMOVE UNAUTHORISED CONTENT AND THE RELEVANT AND NECESSARY INFORMATION TO PREVENT FUTURE UPLOADS (ART. 17(4)(c))

**Background**

The third condition set out in Article 17(4) (c), which is also subject to the principle of proportionality laid down in paragraph 5 and the safeguards for legitimate uses in paragraph 7, is that online content-sharing service providers should be liable for the use of unauthorised content unless they demonstrate that they have acted expeditiously, upon receiving a sufficiently substantiated notice from the rightholders, to disable access to, or to remove from their websites, the notified works or other subject matter, and that they have made best efforts to prevent their future uploads in accordance with Article 17(4)(b). Pursuant to Article 17 (8), the application of Article 17 should not lead to any general monitoring obligation.

**Possible elements for the guidance:**

The guidance should give indications to Member States on how they should implement Article 17(4)(c) in their national laws. Member States should bear in mind that the two conditions set in letter (c) are subject to the principle of proportionality provided for in Article 17(5). The ‘best efforts’ that service providers should make to prevent future uploads of notified works should be approached in the same way as in relation to Article 17(4)(b). The guidance should recall the importance of assessing whether the best efforts have been made by service providers on a case-by-case basis.

Member States should also bear in mind that the application of Article 17 should not lead to any general monitoring obligation and that legitimate uses have to be safeguarded as provided for in paragraphs 7 and 9, and as further explained in section IV. This is particularly relevant for the application of the second part of letter (c), according to which service providers have to make their best efforts to prevent future uploads of notified works.

The guidance should also indicate that when implementing Article 17(4) letter (c), Member States need to clearly differentiate the type of information rightholders provide in a ‘sufficiently substantiated notice’ for the removal of content (the ‘take-down’ part of letter (c)) from the “relevant and necessary information” they provide for the purposes of preventing future uploads of notified works (the ‘stay-down’ part of letter (c), which refers back to letter b).

With regard to the elements to be included in a ‘sufficiently substantiated notice’ submitted by rightholders, the guidance should recommend Member States to follow in their implementation the Commission Recommendation on Measures to Effectively Tackle Illegal Content Online[1]. The information provided should be specific and detailed in nature in a way in which it verifies not only the work or protected subject matter and the specific rights held by the rightholder but where it is alleged to be on the website in question. Points 6 to 8 of the Recommendation list elements that could be included in the notices. As the
Recommendation is a horizontal non-binding instrument and therefore not copyright specific, existing national rules and current practices for copyright notices, which may contain more details, could also be applied.

Article 17(4) letter (c) second part (the ‘stay down’ obligation) refers back to letter (b) of the same paragraph. As a consequence, in order for the service providers to be able to deploy their best efforts to avoid future uploads under this provision, rightholders have to provide them with the same type of ‘relevant and necessary’ information which is relevant for the application of letter (b). This means for example that, if a service provider uses fingerprinting technologies to avoid future uploads of notified works, receiving as information only the title of a song and its location, as identified in a notice, would be insufficient. In this case, to allow service providers to avoid future uploads of notified works, rightholders would need to provide the services with fingerprints or content files. If rightholders have already provided the ‘necessary and relevant’ information under letter (b) of Article 17(4) with regard to a specific notified work, they should not be obliged to re-submit the same information for the purposes of ‘stay-down’, but this should be assessed on a case-by-case basis.

Question 10: What information do you consider a sufficiently substantiated notice should contain in order to allow the online content-sharing service providers to act expeditiously to disable access/remove the notified content?

Besides the need for specific and detailed notices, the Guidance document should focus on how the risks of over-blocking and general monitoring can be avoided. The Guidance should also recommend how to deal with repeated negligent claims. Self-declared rightsholders who act in bad faith should face penalties and other sanctions.

Question 11: Are there any other elements related to the ‘notice and take down’ and ‘notice and stay-down’ systems provided for in Article 17(4)(c) that should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

Many takedowns target clearly infringing content. But there is ample evidence that rightsholders and others abuse this power on a regular basis—either deliberately or because they have not bothered to learn enough about copyright law to determine whether the content they object to is unlawful. At EFF, we have been documenting improper takedowns for many years, and highlight particularly egregious ones in our Takedown Hall of Shame (https://www.eff.org/takedowns). The Guidance should seek to ensure that platforms, which often place their hopes in flawed automated processes, do not over-block user content (https://www.eff.org/deeplinks/2018/09/platform-censorship-lessons-copyright-wars).

4. SPECIFIC LIABILITY REGIME FOR START-UPS (ARTICLE 17.6)

Background

Article 17(6) provides for a specific liability regime for ‘new’ companies, with lighter conditions. This is in
practice a two-tier regime applicable to services, which have been active in the EU for less than 3 years and have an annual turnover of less than 10 million euros with different rules applying to them depending on the audience they attract. In practice:

(i) If those ‘new’ services have less than 5 million unique visitors they are required to make their best efforts to obtain an authorisation (Art.17 (4) (a)) and they have to comply with the ‘notice and take down’ obligation under Art. 17(4) (c), first part.

(ii) If those ‘new’ services have more than 5 million unique visitors they are subject to the same obligations of best efforts to obtain an authorisation and ‘notice and take down’ as services with a smaller audience but in addition, they also need to comply with the obligation to avoid future uploads of notified works under Article 17 (4) (c) second part (‘stay down’ obligation).

For both categories of services, the condition of best efforts to ensure the unavailability of unauthorised content, provided for in Article 17 (4)(b), is not applicable.

Possible elements for the guidance:

The guidance should provide indications to the Member States for the implementation of the specific liability regime set out in Article 17(6). It could focus on certain elements of the liability regime, which may raise practical questions, such as how to calculate the annual turnover of the services and the number of monthly unique visitors. It would remind for example that the annual turnover needs to be calculated in accordance with the Commission Recommendation 2003/361/EC for SMEs. It would also explain that the number of monthly unique visitors refers to visitors across the Union, as explained in recital 66, and not per Member State.

The guidance should also clarify that the principle of proportionality provided for in Article 17(5) and the safeguards for legitimate uses under Article 17(7) apply to the liability regime for ‘new’ services. In this context, the guidance could provide some examples of what best efforts could be expected from the ‘new’ services covered by Article 17(6) for obtaining authorisations and where applicable, for preventing future uploads of notified works, in the light of the principle of proportionality.

Question 12: What specific elements of the specific liability regime for “new” services, provided for in Article 17(6), should in your opinion be addressed in the guidance and how?

2600 character(s) maximum

Smaller companies play an important role today in the EU tech ecosystem. There are national alternatives to Instagram, Google, and Facebook that outperform U.S. Big Tech in their countries of origin. However, the badly designed specific liability regime for new services impose a huge risk on smaller tech companies, which do not have the capacity to deal with the inevitable flood of copyright claims, often brought by copyright trolls. Only a handful of new services will fulfill all three cumulative criteria set out by Art 17(6) and face competition with big tech whose main intention will be to over-comply with the C-DSM obligations in order to protect their business model.

The Guidance document should focus on how to safeguard the diversity of platforms in light of the principle of proportionality and the telos of Art 17.
IV. SAFEGUARDS FOR LEGITIMATE USES OF CONTENT (Art. 17(7)) and REDRESS MECHANISM FOR USERS (Art. 17(9))

Background

Article 17(7) and 17(9) lay down rules aiming to ensure that any action undertaken together by service providers and rightholders does not lead to the unavailability of content which does not infringe copyright. This is of particular importance (but not only) for the application of Article 17(4) letter (b) and second half of letter (c), whereby online content-sharing service providers need to make their best efforts to ensure the unavailability of unauthorised content and to prevent future uploads of notified works. Article 17(7) also provides that the Member States must ensure that users in each Member State are able to rely on the existing exceptions or limitations for quotation, criticism, review and use for the purpose of caricature, parody or pastiche when they upload and make available their content on online content-sharing service providers’ websites. Under Article 5 of Directive 2001/29/EC these exceptions were optional and therefore not all Member States have implemented them. Article 17 (7) makes these exceptions mandatory for all Member States for the uses of copyright protected content covered by this provision.

Article 17(9) requires online content-sharing service providers to put in place a redress mechanism allowing users to challenge the blocking or removal of their content. Disputes can occur when content-sharing service providers disable or remove access to user uploaded content, whereas users consider their uploads legitimate, for example uses of third party content under an exception or limitation to copyright.

Article 17(9) further requires that the Directive shall in no way affect legitimate uses, and shall not lead to any identification of individual users nor to the processing of personal data, except in accordance with Directive 2002/58/EC and Regulation (EU) 2016/679. It also requires online content-sharing service providers to inform their users in their terms and conditions that they can use works and other subject matter under exceptions or limitations to copyright and related rights provided for in Union law.

Possible elements for the guidance:

The guidance should explain what Member States have to do to implement Article 17(7) and the relationship between that provision and Article 17(4). Article 17(7) is addressed to safeguarding any content uploaded by users that does not infringe copyright or related rights including by virtue of the application of any exception or limitation. Such non-infringing use is often referred to as ‘legitimate use’. In addition, Article 17(7) second paragraph introduces certain mandatory exceptions for users that upload content online.

Member States should be recommended to explicitly transpose in their law the text of Article 17(7) first paragraph whereby the cooperation between online content-sharing service providers and rightholders, in particular under Article 17(4), must not result in the prevention of the availability of works or other subject matter uploaded by users, which do not infringe copyright and related rights, including where such works or other subject matter are covered by an exception or limitation.

Member States are required to transpose in their national laws the mandatory exceptions in Article 17(7) second paragraph covering the case of content uploaded by users on online content-sharing services for:

(a) quotation, criticism, review
(b) use for the purpose of caricature, parody or pastiche

Whilst the exceptions or limitations in Directive 2001/29/EC are optional in nature and addressed to any user, Article 17(7) applies to all users in all Member States who must be able to rely on these exceptions or limitations when they upload content on online content-sharing service providers' websites. Recital 70 explains that allowing users to upload and make available content generated by them for the purposes of the exceptions or limitations in Article 17(7) is particularly important for ‘striking a balance between the fundamental rights laid down in the Charter of Fundamental Rights of the European Union (‘the Charter’), in particular the freedom of expression and the freedom of the arts, and the right to property, including intellectual property’.

(i) Legitimate uses under Article 17(7)

Examples of legitimate uses may include (1) uses under exceptions and limitations, (2) uses by those who hold or have cleared the rights in the content they upload or covered by the authorisation under Article 17 (2); (3) uses of content not covered by copyright or related rights, notably works in the public domain or for example content where the threshold of originality is not met.

The guidance could recall that uses under exceptions and limitations cover the upload and making available of content under the mandatory exceptions in Article 17(7) but also under other – optional - exceptions that Member States may have implemented under Article 5 of Directive 2001/29/EC. Some of those are particularly relevant for uses on online content-sharing services and Member States, which have not done so, could be recommended to implement them for uses covered by Article 17 (for ex. incidental use)[1].

Member States that may have already implemented the exceptions made mandatory by Article 17(7) under Directive 2001/29/EC should review their legislation to make sure it complies with Article 17(7) and if needed, adapt it accordingly. Member States whose laws do not provide for these exceptions will have to transpose them as a minimum for the uses covered by Article 17.

The guidance should give indications to the Member States on the interpretation of the mandatory exceptions, in line with the case law of the Court of Justice of the European Union.

(ii) Practical application of Article 17(4) in compliance with Article 17(7)

The guidance should also give indications to the Member States as to how they can direct online content-sharing service providers and rightholders to apply in practice Article 17(4) in compliance with Article 17(7). The objective should be to ensure that legitimate content is not blocked when technologies are applied by online content-sharing service providers under Article 17(4) letter (b) and the second part of letter (c).

The guidance should explain that the balancing sought by the Directive requires, besides the effective complaint and redress mechanism discussed in the subsequent section, that the cooperation between service providers and rightholders does not result in blocking legitimate uses. Therefore, the guidance would take as a premise that it is not enough for the transposition and application of Article 17 (7) to only restore legitimate content ex post, once it has been blocked. When service providers apply automated content recognition technologies under Article 17(4), on the basis of the relevant and necessary information provided by the rightholders, legitimate uses should also be considered at the upload of content.
It should be born in mind that in the current state of the art, content recognition technology cannot assess whether the uploaded content is infringing or covered by a legitimate use. However, technology may assist service providers to distinguish uploads likely to be infringing for the purposes of Article 17(4) from uploads likely to be legitimate, based on the application of technical parameters as explained below. In order to ensure compliance with Article 17(7) in practice, automated blocking of content identified by the rightholders should be limited to likely infringing uploads, whereas content, which is likely to be legitimate, should not be subjected to automated blocking and should be available.

This distinction between likely infringing and likely legitimate uploads would not introduce any new legal concepts, nor would it imply a final legal assessment as to whether an upload is legitimate or not, but it would be a reasonable and practical way for service providers to apply Article 17(4) in line with Article 17(7) when they use content recognition technology. This mechanism should also not prevent the possible use of technology for reporting and remunerating the use of authorised content under contractual terms agreed by rightholders and service providers.

Under this approach, when uploads match with the relevant and necessary information provided to them by the rightholders, service providers should assess their legitimacy in compliance with Article 17(7) and proceed, where applicable, to block likely infringing uploads. In such a case users should still be able to contest the blocking under the redress mechanism provided for in Article 17(9), which requires human review for the contested content before a decision is taken whether it should stay down or be restored.

In cases when it is not possible for online content-sharing service providers to determine on a reasonable basis whether an upload is likely to be infringing and the service providers use content recognition technology, the service providers should notify the user that (part of) the upload matches with the information (e.g. fingerprint) provided by the rightholders. If the user contests the infringing nature of its upload, service providers should submit the upload to human review for a rapid decision as to whether the content should be blocked or be available. Such content should remain online during the human review. If rightholders disagree with the decision of service providers to keep the content up, they would be able to submit a notice in compliance with Article 17(4) letter (c) to ask for the removal of the content that they consider infringing. If, on the other hand, upon being notified by the service provider, the user does not contest the infringing nature of the upload, the content could be blocked without further review, without prejudice to users' ability to rely on other available redress, including judicial review.

The human review process should be swift and allow both rightholders and users to provide their views. If, as a result of the human review, the service provider decides to disable or remove the uploaded content, it should inform the user of the outcome of the review; and the user should be able to have recourse to the out-of-court dispute resolution mechanism, provided for in Article 17(9).

The distinction between likely infringing and likely legitimate uploads could be carried out by service providers in cooperation with rightholders based on a number of technical characteristics of the upload, as appropriate. Relevant technical parameters could be, among others, the level of match with the reference file provided by rightholders for the purposes of Article 17(4), the length/size of third party content used in the upload and whether it is surrounded by user’s own content. For example, in application of such technical parameters, the upload of a video of 30 minutes, where 29 minutes are an exact match to a reference file provided by a rightholder, could likely be considered an infringing one, unless it is in the public domain or the use has been authorised. On the other hand, a user generated video composed by very short extracts, such as one or two minutes of different scenes from third party films, accompanied by
additional content such as comments added by the user for the purpose of reviewing these scenes could
be more likely to be legitimate because potentially covered by an exception such as the quotation
exception. Similarly still images uploaded by users which match only partially the fingerprints of a
professional picture could be legitimate uploads under the parody exception, as they could be 'memes', i.e.
new images created by users by adding elements to an original picture to create a humoristic or parodic
effect.

The application of technical parameters should not be arbitrary and should be without prejudice to any legal
decision on the nature of the content uploaded, i.e. whether it is an infringement of copyright or a related
right or not.

Member States should remain free to introduce specific measures to discourage the abuse of this
mechanism by users or rightholders.

Finally, in order to minimise the risk that authorised content uploaded with the authorisation of rightholders
is blocked, Member States may consider recommending service providers to use the practice of
‘whitelisting’, which allows rightholders to indicate to the service providers users and uses that they have
authorised. For example, in case of co-productions or partnerships, broadcasters can indicate to service
providers which other broadcasters or partners are authorised to upload their content. Such uses would not
require the application by service providers of content recognition technologies for blocking purposes.

(iii) Complaint and redress mechanism under Article 17(9)

Article 17(9) requires Member States to provide for a complaint and redress mechanism that online content-
sharing service providers have to make available to users in the event of dispute over the blocking or
removal of their content; it also requires Member States to ensure that out-of-court redress mechanisms
are available for the settlement of these disputes. When approaching Article 17(9) Member States should
bear in mind that the obligation on service providers to put in place a complaint and redress mechanism
should be implemented in line with the Union law rules on freedom to provide services, including the
‘country of origin’ principle provided for in Article 3 of Directive 2000/31/EC on e-commerce, when
applicable.

The guidance should give indications to the Member States on how they could instruct service providers to
apply the complaint and redress mechanism in practice. It could suggest that when content is blocked as a
result of the application of the mechanism described above for the practical application of Article 17(4) in
compliance with Article 17(7), the contested content, which is likely infringing should stay down pending the
human review required under the redress mechanism. This would correspond to the approach that only
uploads likely to be infringing could be automatically blocked under Article 17(4) in compliance with Article
17(7) and Article 17(9). Content that service providers remove ex post under the notice and take down
procedure under Article 17(4) letter (c) should only stay down pending the redress, provided that the notice
submitted by rightholders is a 'sufficiently substantiated' notice.

In line with the requirement of Article 17(9) that the complaints by users be processed without undue delay,
the guidance should suggest that as a rule service providers and rightholders must react to complaints from
users within a reasonably short timeframe to ensure that the mechanism is expeditious. If rightholders do
not react in a reasonable timeframe, content which has been blocked or taken down should become
available or be restored. The guidance should also recall rightholders’ obligation to duly justify their requests to have content uploaded by users blocked or removed and encourage rightholders to provide this justification in clear and simple terms to make it understandable to an average internet user.

If the final decision by service providers is to keep the content unavailable, users must be able to contest this decision through the impartial out-of-court dispute settlement mechanism, which Member States have to make available. The guidance should indicate that the out-of-court dispute settlement mechanism can be an existing one but with relevant expertise to handle copyright disputes. It should also be easy to use and with no cost for users.

The guidance should also indicate to the Member States that they need to implement in their law the obligation on online content-sharing service providers to inform their users in their terms and conditions that users can use works and other subject matter under exceptions or limitations to copyright and related rights provided for in Union law.

The guidance could also recommend how service providers can increase users’ awareness of what may constitute legitimate uses, as required by Article 17(9). For example, Member States could encourage the service providers to put in place standard forms for users to contest the blocking or removal of their content. This could also be accompanied by information aiming to foster users’ awareness of copyright concepts and to encourage a responsible behaviour when uploading content online.

Finally, the guidance should underline that any processing of personal data and identification of users that may be required in the context of the application of Article 17 needs to be done in compliance Directive 2002/51/EC on e-privacy and Regulation 2016/679 on general data protection. Member States should monitor the correct application of these rules.

**Question 13:** Do you have additional suggestions to implement Article 17(7) to ensure a fair balance between different fundamental rights notably between copyright and freedom of expression? Would you agree with the approach presented above or do you consider other solutions could be used?

2600 character(s) maximum

We agree with the statement that “content recognition technology cannot assess whether the uploaded content is infringing or covered by a legitimate use”. Filter-technology may serve as assistants of decision-making, but can never replace a (legal) review by a qualified human being. The Guidance document should thus make clear that fully automated decision-making without additional safeguards does not live up to the standard envisaged by Art 17.

However, the Guidance document should abstain from suggesting that compliance can be ensured by automated blocking of content as regards “likely infringing uploads”. A platform cannot know a priori whether content is “likely infringing” or “likely not infringing”. There is no space for interpretive pleonasms - platforms should block what they are supposed to block - in a Guidance document. It also contradicts the correct statement that filter-technology cannot assess whether content is covered by exceptions or not. This applies a fortiori to situations where such technology is supposed to make a granular assessment of likelihood.

There are additional legal reasons why the Guidance should abstain from recommending thresholds. Most importantly, Art 17 has not anchored any threshold or likelihood-test, but, instead, makes clear that the
availability of works, which do not infringe copyright and related rights, including those matters covered by an exception or limitation, must be guaranteed. EFF recommends to focus on how to safeguard these rights and exceptions, rather than petrifying the use of current automated filter-technologies by introducing a plausibility assessment.

Question 14: Do you have additional suggestions on how the guidance should address the implementation of the complaint and redress mechanism and of the out-of-court dispute settlement under Article 17(9)?

EFF stresses the need to have the interest of users and freedom of speech in mind when working on the implementation of the Directive, as well as the risk of embracing rules that may solidify the dominance of big tech platforms that already exist. Fundamental rights protection must be protected ex ante, at the latest at the moment users post or upload content, and not be shifted to the complaint stage after legitimate content has been taken down. Everyone has the right to freedom of expression without interference by filtering technologies, which are not able to perform context-sensitive interpretations. There is legislative leeway to make sure, as Art 17(7) of the C-DSM sets out, that the cooperation between online content-sharing service providers and rightholders does not prevent the availability of works or other subject matter uploaded by users, which do not infringe copyright and related rights. It would have a severe chilling effect if users were left only with a complaint-procedure, which many users are unlikely to use.

Question 15: Are there other elements than those outlined above that should be addressed for the concrete implementation of Article 17(7) and (9)? If yes, please explain which ones and how the guidance should address them.

Evaluating the performance of filters to block copyright infringement and to not block legitimate content will present a major technical challenge, but it’s not an unprecedented one (https://www.eff.org/deeplinks/2020/02/europeans-deserve-have-their-governments-test-not-trust-filters). Law and regulation are no stranger to technical performance standards. Regulators routinely create standardized test suites to evaluate manufacturers’ compliance with regulation, and these test suites are maintained and updated based on changes to rules and in response to industry conduct. Test suites are the standard way for evaluating and benchmarking technical systems, and they provide assurances to consumers that the systems they entrust will perform as advertised. Reviewers maintain standard suites for testing the performance of code libraries, computers and subcomponents and protocols and products. The Guidance should include a recommendation to create and maintain test suites if member states decide to establish copyright filters. These suites should evaluate both the filters’ ability to correctly identify infringing materials and non-infringing uses. Filters should not be approved for use unless they can meet this challenge.

It is also important that the Guidance explains the complex interrelationship between Art 17 C-DSM and user privacy rights. There is consensus that automated systems for catching and blocking copyright infringement will have a significant impact on users, who will sometimes find their legitimate posts erroneously removed or blocked. However, under Article 22 of the GDPR, users have a right “not to be subject to a decision based solely on automated processing, which produces legal effects concerning him or her or similarly significantly affects him or her.” Save for exceptions, this provision protects users from detrimental decisions made by algorithms. A mandated removal and blocking of user content, including the assessment of whether content is likely to infringe copyright, will fall within the scope of the GDPR and will often result in legal or significant effects as envisioned under Art 22 GDPR (https://www.eff.org/deeplinks/2020/02/upload-filters-are-odds-gdpr). The Guidance should thus focus on how to safeguard data protection rights and recommend the appropriate safeguards beyond ex-post focused legal remedies.
V. INFORMATION TO RIGHTELDERS (Art. 17(8))

Background

Under Article 17(8), online content-sharing service providers need to provide rightholders, at their request, with information on the functioning of the tools used for ensuring the unavailability of content. Where they conclude licensing agreements with rightholders, the service providers also need to provide them with information on the use of their content, without however having to provide rightholders with detailed and individualised information for each work or other subject matter identified (recital 68).

Possible elements for the guidance

The guidance should recall the different elements set out in Article 17(8) and explain in particular how Member States should direct the parties to apply this provision in practice. It should give indications as to the information that service providers should provide to rightholders, if requested, to comply with it. For example, information on content recognition tools deployed by service providers to avoid unauthorised content could include descriptions on the efficiency of these tools, the general parameters used for their deployment, as well as any changes made overtime to the operation of these tools. As regards information on the use of content covered by the agreements concluded between service providers and rightholders, the guidance should recall that service providers are not required to provide detailed and individualised information on each work, and encourage the development of standardised reporting through voluntary cooperation between stakeholders. Some more specific requirements on reporting exist already under Article 17 of Directive 2014/26/EU and govern the relationship between users and CMOs.

In line with the Commission Recommendation on illegal content online, in order to ensure a high level of transparency to users, the guidance could recommend that Member States encourage online content-sharing service providers to publicly report on the functioning of their practices with regard to Article 17(4).

Question 16: What are the most important elements that the guidance should cover in relation to the information that online content-sharing service providers should provide to rightholders on the functioning of their tools to ensure the unavailability of unauthorised content and on the use of rightholders’ content under Article 17(8)? Please provide examples of particular information that you would consider as covered by this obligation.

In line with EDRi, we support the Commission’s suggestion that OCSSPs should share transparency reports on the functioning of their practices publicly, but we have doubts whether a mere encouragement of service providers to do so would be sufficient. The Guidance should be extended to include additional information and transparency obligations of service providers, not only with regard to rightholders, but also with regard to user organizations, researchers and the general public. Service providers must also inform users about the functioning of their tools to ensure the unavailability of unauthorized content, including the grounds and circumstances of blocking or deletion in individual cases. This requires a notification from the service provider about the possibility of contesting the decision together with information about the reasons and the legal basis for blocking or deleting the content without the need for a corresponding request from the users. In addition, users’ organizations should also have a right to information. This is necessary in order to identify systematic abuses, as otherwise the organizations could only become aware of repeated abuses when they are informed by individual users. This is in line with the legal concept of Art. 17 (10). This provision shows...
that the Directive is designed to ensure that a minimum of information is available to all stakeholders on the practices between service providers and right holders. In practice, however, service providers have not provided user organizations with the information pursuant to Art. 17 (10) in the context of the stakeholder dialogue. In order to ensure that this obligation does not become moot, the Commission should instruct Member States to implement an information obligation of OCSSPs towards user organizations in their national laws. Additionally, the Commission should advise Member States to collect information about the cooperation between rightsholders and OCSSPs in the context of Art. 17 in a mandatory public database. The voluntary Lumen Database by Harvard University, which collects information on the notice-and-takedown system, could serve as a blueprint for such a database. As was shown in the Lumen Database presentation during the stakeholder dialogues, the database has been a crucial resource for researchers and journalists, inter alia uncovering the systematic use of abusive takedown notices to suppress legal expression.

**Question 17:** Are there any other elements beyond the ones listed above which should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

**VI. OTHER TOPICS**

**Question 18:** Do you think the guidance should address any other topic related to Article 17? If yes, please indicate which topics you consider should be included in the guidance and how you consider the guidance should address them.

2600 character(s) maximum

**FINAL REMARKS**
