Good Morning gentlemen. Please read the message below regarding my Case Agents target. The Agent still insists that the target is using text messaging, despite all my efforts to find it. [redacted] told me that if the phone was used for any SMS it would show up in the DCS-3000. I am not convinced that the target is using his [redacted] phone for SMS. Is there anything I'm missing? Thanks for your time..... [redacted]

~~SENSITIVE BUT UNCLASSIFIED~~  
~~NON-RECORD~~

[redacted]  
Here are the questions posed which we discussed earlier today:

1. Identify and fully describe the DCS-3000 database.
2. The FBI's practice regarding storing, accessing, marking, deleting, and handling of FISA materials within the system.

There is another question re minimization procedures which could be adopted on an expedited basis, but I don't believe this would pertain to the DCS-3000. It seems the time line for completing this is on hold, so please do not rush to get this completed. Thanks.

 Subject: DCSNET connection to an RA in your division

~~UNCLASSIFIED~~  
NON-RECORD

Hi all,

Your offices have been identified to receive the next step in the DCSNET disaster recovery plan. This involves identifying one RA from each of your divisions to which TICTU will build a DCSNET connection. This way, in the event of a disaster at your main office, a failover site for DCS-3000 collections will already be ready to use. TICTU will be paying for these circuits.

Please choose an RA in your division that you would like to have a DCSNET connection and respond to this email with the RA name, address, and any specific demarc instructions you may have. We also need the names and phone numbers for two points of contact (one of which needs to be local to the RA). We can only build circuits to regular RAs, not covert offsites. You may choose an RA that already has a connection that you are currently paying for, but we cannot just take over payments; we will have to build a new circuit there.

If you can get this info back to me by next Thursday, January 12, you can expect your circuits about 2 months after that.

Please give me a call if you have any questions or concerns about this.  
thanks!

[redacted]

I'm in NY this week so maybe you and [redacted] could talk about this a little more. Basically [redacted] is supplying new workstations for all of the Red Wolf and VB work stations, we are not moving the old ones. By workstations, I mean a computer table/desk to set the client terminals on and for a LS or Agent to work at. It would be nice to have two additional, matching work stations per T-3 room to set the DCS3000 clients on. [redacted] had not planned to purchase these. I was inquiring on the availability of budget for buying new ones to match [redacted] new ones. [redacted] could tell you the cost. If this is not an option, we will probably have to select the best ones from Clark Street to move. It would be much more desirable to have units that match [redacted] for fit and function if there is a way to pay for them.

b6  
b7C

I'll try to check e-mail as I can, let me know what you think.

Thanks.

b6  
b7c

[redacted]

We are making our plans to move into our new Chicago Office in April of 2006. I have been working with [redacted] [redacted] group) and they are supplying workstations for our Voice Box and Red Wolf client terminals in our T-3 rooms. The "workstations" are basically a 48" wide work table with shelf for the VB or Red Wolf client computer to sit on so an Agent or LS can sit and monitor the T-3 or FISA. They tell me that they have not planned to supply workstations for DCS3000 terminals. Every T-3 room in Chicago has two DCS3000 terminals for live pen monitoring and cell site information. Does your group have a facilities person or budget to supply workstations to support the DCS3000 terminals? Can you recommend someone from your group that would be the appropriate contact person for me?

Gentlemen,

Due to the short deadline (Thursday), I have asked [redacted] to put together some questions and contact the below listed applicants for a telephone interview. I have already spoke with two of them to secure a time-frame when they can be interviewed tomorrow. In speaking with Human Resources, any number of questions can be asked as long as everyone is asked the same questions. We are to handle three of the below, [redacted] group will interview the rest.

FINAL APPLICANTS

[redacted] expecting a call Tuesday 13:00 - 16:00 (will be in all day and has interviewed with TRU); had TS-SCI clearance

[redacted] expecting a call Tuesday 07:00 - 16:00 (preferably after 13:00); has S clearance  
[redacted] left message at residence (no answer at work; needs follow-up)

[redacted] DCS-3000 team to arrange a telephone interview (we are welcomed to participate)  
[redacted] - DCS-3000 team to arrange an in-person interview at the Academy (we are welcomed to participate)  
[redacted] DCS-3000 team interviewed him this afternoon (a DCS-3000 team selection)

In your copious free time and if you have it readily available could you send me some info re the protocol for setting up the various vendors in the DCS. I believe that only [redacted] require information in the Case ID block when setting up a pen register.

Additionally, can we provision our target on our DCS prior to the phone company provisioning it in their system without locking the system?

We are trying to train the newbies and would like to have some correct cheat sheets for them to work off of.

Thanks,

[redacted] 713 [redacted]

[redacted]

Thanks for getting the new circuit in. Re your other questions,

1. We are still scheduled for October 3.
2. The only DCS equipment I wouldn't mind help with is the DCS5000. I have ordered lines in St Louis and will be transferring my FISAs there temporarily so that we don't lose any data, so there is not a big hurry to get my system running, and we can physically move the system there, but I wouldn't mind having Raytheon get the stuff running again. But this can happen later in October, when things aren't as hectic, as St Louis will be collecting.
3. I don't know whether or not the T1 cable has been run already. AQC was out but I don't know what all they did. Is it any big deal running the cable? If not we can do it.
4. I would love to have rack-mounted DCS3000 if that works out.
5. Our new office is about 4 miles from the old office.

b6  
b7C

Thanks, [redacted] Also, FYI, I won't be here during the move [redacted] 9/30-10/10; BAE annual conference 10/12-18) so if

Just to let you know, we now have a supposedly firm date for our office move, 10/3/05. I think that we will probably need dual circuits for a while, keeping our circuit up here until we are online in the new building. The new building address is 900 Linton Ave., Springfield, IL, 62703.

If there's any other info I need to get, please let me know.

Thanks [redacted]

As you know, the DCS-3000 system is used by all 56 field offices for collection of all CALEA-based pen-register/trap-trace intercepts for both criminal and national security investigations. At the end of CY2004, SBIT added a feature to the DCS-3000 system that allows us to collect specific performance metrics from each field office's DCS-3000 system. These metrics include the number of current intercepts, the intercept types (i.e. Title-50), and the telecom providers. We periodically query each DCS-3000 system for this information and populate a metrics database to help us generate statistics and forecasts. Here are the numbers for 2005:

[redacted]

b2  
b7E

[redacted]

[redacted]

This budget analysis shows the direct annual cost of the DCS-3000 system (software and capital hardware) [redacted]  
For CY2005, the cost per intercept (cost per line) for the DCS-3000 system is estimated to be [redacted]

~~SECRET~~

The goal of SBIT is to meet and exceed the expectations of our field office customers. To date, I think we have accomplished this goal with remarkable efficiency [redacted]

[redacted] The members of SBIT are proud of our accomplishments and reputation, and we hope to continue to do good work on behalf of TICTU.

[redacted] Somehow one the agents here obtained a court ordered pen register with [redacted] for a [redacted] account with just the [redacted]

[redacted] has however provisioned it for the pen and [redacted] but needless to say the DCS3000 isn't collecting anything. Is it possible to collect based on an IMSI, or does the DCS need a ten digit phone number. It is currently in the Northern Calif. market with surveillance ID's and passwords available for Southern Calif. and the Arizona market [redacted] has provided three separate surveillance id's and passwords for these markets. I don't know is the phone is being used outside of these three markets, which may explain why we haven't collected anything. The agent also has two other [redacted] lines set up in the same markets. They are collecting in Northern Calif., because I have them entered in Northern Calif. If they stop collecting, I was going to enter the other surveillance ID and password for the the Southern Calif. market; see if it collected and change it to the Arizona market if Southern Calif. didn't collect. Am I going in the right direction with this? Any guidance will be appreciated. Thanks [redacted]

Your have systems (EDMS, DCS systems, CART SAN, DITU systems) that may be designated as "Mission Critical". OTD System Managers are requested to provide information about the Continuity Of Operations Plans (COOP) for systems designated as mission critical. As noted in the attached EC, information is to be entered at the following FBI Intranet website by 8/5/2005.

b2

[Redacted]

If your system is mission critical, please provide me with the system name and a copy of your COOP plan and an email response to indicate that you have provided the requested information to the website. If your system is not considered critical let me know that also.

[Redacted]

You may have a list of OTD systems that are dsignated "Mission Critical" and have or should have COOP plans. Please provide this list to me so that the PMO can make sure all appropriate system managers provide the requested info.

PMO will prepare an EC indicating OTD's compliance to the OCIO's request.

If this [redacted] is connecting 2 DCS3000 units (and the write up can be interpreted two ways) then it would be logical for the DCS3000 team to provide it. In a brief conversation with [redacted] yesterday, he was also of the opinion that this request should have been forwarded to the DCS-3000 team first. Again, we went ahead and purchased it on a credit card, so this particular request has been covered.

b6  
b7C

[redacted]  
I really couldn't say if this will become a common request or not. I can see where the field may want this capability, but from a system (DCS 5000) perspective, we already provide [redacted] switches which allow them to access the various servers within the DCS 5000 from a single point. As for the capability to access other systems - particularly UNCLAS systems, I would have to consider that a CMP issue. When I forwarded the RMS to you, I was not recommending that you provide the equipment, but pointing out that it needed to be handled in a timely manner. If the equipment is not going to be provided, the site needs to be aware so that they can insure that they are in compliance with security requirements.

Hope this helps clarify things.  
Thanx

We will order this on behalf of TICTU. Do you expect this to be a one time request or will there be 55 other requests for [redacted]? This would seem to be a system specific piece of equipment which would logically be handled by TICTU.

[redacted]

Can we buy this on your credit card? Is is approximately \$200.

[redacted]

I really couldn't say if this will become a common request or not. I can see where the field may want this capability, but from a system (DCS 5000) perspective, we already provide [redacted] switches which allow them to access the various servers within the DCS 5000 from a single point. As for the capability to access other systems - particularly UNCLAS systems, I would have to consider that a CMP issue. When I forwarded the RMS to you, I was not recommending that you provide the equipment, but pointing out that it needed to be handled in a timely manner. If the equipment is not going to be provided, the site needs to be aware so that they can insure that they are in compliance with security requirements.

Hope this helps clarify things.  
Thanx

Aloha [redacted]

Last week I emailed [redacted] regarding not being able to access the DCS3000 from my computer anymore. I used to be able to have a direct connection into the system in the server room that you set up. I can't get into anything anymore. Can you still get into our system? If so, is there a way you can look at it to see why I can't get in anymore? Also, there is nothing listed when you go into the start menu. It just lists Windows catalog and Windows update. What happened to all the other programs it used to list? There is no rush, but when you have time could you please check on this for me?

Thanks!  
Aloha,  
[redacted]

Subject: Contract Review Board July 14th

~~SENSITIVE BUT UNCLASSIFIED~~  
~~NON-RECORD~~

b6  
b7C

There is a Contract Review Board scheduled for July 14, 2005 at 2:30pm.  
[redacted] and [redacted]  
[redacted] will represent TICTU. [redacted] and  
[redacted] will be seeking contract approval.

The contract is with Booz Allen and Hamilton (BAH) for the amount of \$1,497,736.92.

The DCS-3000 software suite is the Bureau's primary CALEA pen register collection application and is maintained by BAH in accordance to Bureau personnel direction. BAH has been active in the development of this CALEA software interface for more than seven years.

TICTU is asking for Logistical support in training and liaison. The need for personnel to tactically implement court-authorized ELSUR and react in exigent circumstances to threats of life is a necessity that requires a significant amount of training and liaison. This requires industry leaders with unique abilities and backgrounds. Also, TICTU requires support with continue software development pertaining to the FBI's ELSUR capabilities. The continuing emergence of new telecommunications technologies requires a unique ability to design and implement solutions at accelerated rates. The lack of a quick reaction capability to adapt ELSUR techniques within the FBI may result in significant vulnerability and exploitation opportunities to enemies of the United States.

A requisition was submitted for \$2,100,000.00. Due to the lack of time on the existing contract, an interim purchase order for the period of performance of May 1, 2005 - July 31, 2005, was put into place for the amount of \$602,263.08. The money for the interim purchase order was taken from the original requisition.

Any questions regarding the Contract Review Board please contact [redacted] at extension [redacted] or [redacted] at extension [redacted]

RECORD [redacted]

b6  
b7c

b2  
b7E

[redacted]

Attached is a list of 27 trouble calls occurring between 07/01/2005 and 07/08/2005 (at 0700 hrs). The list is not entirely representative because the [redacted] failed over the Holiday weekend and we lost all [redacted] intercepts between 07/03/05 15:56:08 and 07/06/05 at approx. 1600 hrs. Moreover, the DCS3000 crashed over the weekend as well; consequently we lost all our Pen data for both cellular phones from 07/01 to 07/06.

If you need any clarification of the comments, please don't hesitate to contact me.

[redacted] If you would, give me a call when you get a chance so that we can eliminate the [redacted] it didn't remedy any of the problems anyway so let's remove that weakpoint in the configuration. (I've forgotten the necessary TIU setting changes.)

Respectfully, b6  
b7c

[Redacted]  
The Time Difference pick in the DCS 3000 pertains to the order expiration times. Since the DCS 3000 looks at the warrant database stop date and time to know when to stop receiving data we need to make sure that we have taken into account the GMT time difference so we don't undercollect in this instance [Redacted] coming in is. Hope this makes sense. [Redacted]

[redacted]

[redacted] at CyD/STAS has experience in handling this sort of problem of "standardizing" disparate data types. I would suggest that we go ahead and set up a time for us all to get together at WFO to get a first-hand view of the problem. Please propose a time for a meeting. The week of the July 11 looks open to me except for Wednesday. If we can get schedules coordinated for at least one representative from CXS, STAS, OTD, and WFO, we can get this rolling.

Thanks,

[redacted]

UNCLASSIFIED  
NON-RECORD

Could you please send me a sample file for the full file format for the DCS3000 which will include the fields that we currently aren't getting. I do have some questions, but seeing the data on the file may answer some of them. Can't really modify the TA software to handle the full file without an example to use.

[redacted]

SSA [redacted] has asked us to accommodate some comments from [redacted] at the Kansas City gathering. He's interested in providing some insight on the preservation of evidence when info is pushed from the DCS-3000 to the [redacted]. This seems to fit really nicely into your Tec-Tips presentation (slide #13). Would you have any objection of inserting a quick "sub-discussion" at that point, turning the floor over to [redacted] for a brief (10 minute) discussion on that issue? He would then turn it back over to you. Or, as an alternative, you can state that [redacted] will address that issue when you're done with the rest of your slides. Whatever works best for you.

I think that this is preferable to providing a time slot for an independent presentation. Time is limited and this may be away to keep everyone happy. Please let me know.

Thanks!

Thanks for all your help with the [redacted] switch transition. During today's conference call it was obvious why the FBI is the best (screwed up sometimes, but still the best) - by having people like you on board. It was obvious that you knew as much (if not more) than the [redacted] people - both on CALEA matters and how the equipment works... I'm sure this transition will not be a "done deal", but needless to say, we wouldn't even know how to start doing this without your help - so is good to have you guys in our arsenal of resources. (and I am not even going to mention my weekly - and sometimes daily - calls to you with DCS-3000 questions).

Thanks again for all the help!

The [Redacted] is a hardware platform developed "in-house" by the Cryptographic and Electronic Analysis Unit to decode [Redacted] mobile-to-mobile telephone calls. The proof-of-concept development was completed in February 2001. In the Fall of 2001, the Telecommunications Intercept and Collection Technology Unit manufactured 100 of these devices for immediate deployment to the field.

The first new employee orientation in 2005 is scheduled for May 10 - 12. Your involvement in 2004 was a key factor in the success of all orientations conducted. As our team continues to merge over the coming months I shall appreciate your feedback and involvement in continual enhancements to the orientation program. As evidenced by orientation survey results and management feedback, new employees are being assimilated more effectively and expeditiously.

The Agenda is attached for your review. I hope that your schedule will allow you to participate. The technology manager portion of the program is scheduled for Wednesday [redacted] (a short break scheduled between sessions). Please let me know if you (or a designated alternate) would be available to provide an overview of the following systems:

[redacted]	DCS3000 [redacted] Break DCS5000 DCS6000	[redacted]	b6 b7C	b6 b7E
------------	--	------------	-----------	-----------

For planning purposes the remaining 2005 orientations are scheduled for: [redacted]

Thanks in advance for your time. I look forward to your feedback on the agenda and your participation. Please call me with any questions you may have.

Regards,  
[redacted]

I just want to make sure it is clear that we here in the RA (or Albany in general) do not have a current investigative need to connect to [redacted] before you have all of your equipment ready. I thought that there was a case somewhere else (Buffalo perhaps) that had a current need to do [redacted] intercepts from the switch here in Syracuse.

So.....unless there is a need to collect data for some other case somewhere, we can wait until you are ready to go.

b2  
b7E

Also, I received a call from [redacted] yesterday. They were just verifying contact info etc... but they estimated that they would have [redacted] out to install the T1 line by the week of 3/28. She said she would call me next week after she got a firm date from [redacted]..

[redacted] we do need to connect the RA to the [redacted] Switch using the POTS line. I was hoping the DCSNET T1 would be in soon and we could connect the RA to the DCSNET and the [redacted] switch all at once. We can do it seperately though so we have coverage for the RA at least for [redacted] intercepts. Until we get the DCSNET T1 in we would have to dial up to the Syracuse RA to have all the offices accesss this. Let me coordinate with [redacted] and we will send the equipment

b2

I am jsut dropping a note to check on the status of your desire to put in a connection from the DCS 3000 network to the [redacted] Switch here in Syracuse to capture [redacted] [redacted] in this region.

As a stop gap measure, we had a pots line installed here in the RA which is available for the connection. I understand that a T1 line will ultimately be installed - I recall talking to somebody and giving my name as a POC for the T1.

Is there a plan/need to use the dial up line in the meantime?

Let us know.

[redacted] I called in a trouble ticket to the phone company after our testing this morning. I requested that the phone company technician call me when they get on site and only do the work between 8 am and noon (Alaska time). This will give me an opportunity to include you in any testing so I can be certain if everything is working properly ... or not. Consequently, I expect to receive a call from the phone technician sometime in the morning (afternoon your time) during the the next few days without any advanced notice and then call (or page) you. My best guess is that the call will come either tomorrow or on Friday.

Hopefully, you will be in a position to assist like you did today. Let me know if you think it would be helpful for [redacted] to be on site with the phone technician, otherwise I will try to get help from one of the techs at Dobson should we need it.

DCS-3000 One-Way Push - Status Update (2/7/05)

b6  
b7c

**SENSITIVE BUT UNCLASSIFIED**  
**NON-RECORD**

All,

The one-way push is currently being field tested at sites [redacted] and [redacted]. There are field issues involving the performance between the one-way push and the RW. All parties involved are working to correct and improve the systems performance. In parallel, [redacted] testing is soon to begin within the ERF facility. This is a complex and integral part of the overall solution. Upon completion, this functionality shall be field tested as stated above.

To date, [redacted] field offices have received the one-way push equipment for installation. [redacted] sites have completed the install, but not yet activated for connectivity. Remaining sites can expect to receive equipment throughout the year and prepare for installation. Each site shall be informed in advance regarding installation and activation. ERF is committed to

~~SECRET~~

minimize both operational risk and system failures. There shall certainly be growing pains as we expand the amount of users incorporating CALEA into the FCI cases. There is a vast number of telco providers and switch vendors that make an exhaustive in-house test virtually impossible. So some point in time, additional sites will be connected in order to field test as needed. We appreciate your cooperation and patience regarding this development process.

Regards,

[Redacted]

[Redacted]

SBIT is assisting the Miami Division with the FBI's first-ever [Redacted] telephone intercepts. Miami "went up" on [Redacted] pen-registers yesterday and expects to implement an emergency FISA either tonight or tomorrow. Miami is using the [Redacted] DCS-3000 system to collect pen-register data and the Red Wolf for T-50 audio. I'll keep you informed.

[redacted] I am planning to travel with [redacted] to [redacted] TN, next Thursday - Friday (2/3-4/05). SBIT has decided to upgrade the [redacted] RA to a node on the DCS-3000 network, due to the [redacted] switch facility located at [redacted] and I will be relocating the DCS-3000 terminal to the CMP, meeting with a [redacted] technician on Friday and installing a new router for the upgrade. The [redacted] RA has continued to exhibit unique "issues" for SBIT/TICTU. We have determined that this course of action is the best solution.

[redacted] As discussed this morning, the 22 ET's and TA's that you had indicated needed Red Wolf System Administrator training. I am passing this list to the Program Staff to have the DCS3000 and Advanced Voice Box training requirements addressed.

b6  
b7C

I look forward to your response as to whether any of these individuals are scheduled to attend the WFO dedicated System Admin Training class scheduled for February 1-3 that would accommodate up to 10 students. Are some of the people on this list scheduled for this class? If not, I'll need to schedule additional classes for those individuals remaining that require training.

The list as provided by [redacted] of the Technical Personnel Development Branch include the following individuals:

Sorry to bother you with this. When the DCS 3000 was accredited in May last year, there was a lien to create and document an audit review and retention procedure. Do to recent focus on tracking Action Plans, mostly driven by FISMA, I need to verify whether or not this has been done.

For the record, DOJ/FBI requirements are for weekly reviews and 90 day retention of audit logs. I suspect that you all probably keep them much longer than that, but I have no idea about your review policy. Please let me know what you can. Attached is the EC stating that this needs to be done. If it has just let me know.

If not, let me know what kind of impact this will have on your time. I know you are busy, and given that it has been this long, if the policy hasn't been done yet, I just need a ballpark estimate date.

Respectfully,

H [redacted]

I just wanted to extend my gratitude to [redacted] for the operational support he is providing. Specifically, [redacted] is instrumental in helping with the development and deployment of the DCS-3000 One Way Push system. SLC was the first official test site approved from the security office which assisted us in order to determine the robustness of our system. It was during this test phase that improvements were developed by Raytheon and incorporated into our latest TIU Software base-line. The new software enables the CCC and CDC data to be correlated using a time-based algorithm. A vast improvement from hard copies and manual correlation. Although the new software hasn't been validated [redacted] continues to provide us with invaluable information. His efforts continue to help us gain great strides as we begin to establish new operations throughout the field. His expertise and knowledge has assisted us in completing our initial goals. We are fortunate to have him on our side. More than thanks are truly in order.

Hi Guys,

I sent two client computers to you [Redacted] Both had the "blue screen of death" on them. When you wipe the drives and load the new operating system, can you also load the [Redacted] server software on one of them. We are starting to have problems with our [Redacted] client [Redacted] actually got the "blue screen of death" on it this past weekend. She rebooted the computer and was able to get it running. Also, can you load Windows 2000 or higher on these machines? We want to store all of the pen register data on a CD when the case is over. NT won't let us install an external CD writer.

[Redacted] wants to know if you guys are working with [Redacted] the telephone applications manager, on the new upgrade to include [Redacted] data and [Redacted] into TA.

b2  
b7E

Why is it when we attempt to do a client upgrade, it does not upgrade to the latest rev. Our .12 machine will only upgrade to 4.8c, our other client machines are at 4.8k. Or does it really make that much of a difference?

Can you load [Redacted] onto .13? The user password is [Redacted]

That's it for now. Thanks for your help!

Subject: [redacted] intercepts on Voice Box III

b2  
b7E

SENSITIVE BUT UNCLASSIFIED  
NON-RECORD

b6  
b7C

Aloha!! Am getting slammed on the [redacted] coverages on Voice Box (VB). Problem is that the [redacted] coverages goes down in the middle of the wire for some unknown reason. The VB cannot handle the intercept and the interconnect coverage ceases on certain lines. What we have done is to switch boxes out, going from the Adtran-BRI card to the [redacted] box and restarting the [redacted] server. When we do this, it seems to be stable for a period of time then the interconnect coverages goes down. This is a random situation, but occurs during a peak time during the T-3.

b6  
b7E

The drug squad is contemplating a roving T-3 which will involve [redacted] of which a number will probably be [redacted] phones. We currently have [redacted] phones up and am having problems randomly on the interconnect (not an every day situation, but enough problems to cause a headache).

Need your help, to explain to the drug squad/supervisor & ASAC what the problems are on the [redacted]. All we do in the field is either restart the [redacted] server or switch the receiver from the [redacted] to the [redacted] and back and forth. We (both [redacted] and I) cannot provide an adequate explanation as to why these [redacted] coverages fail during the middle of the T-3.

FYI, I received an e-mail from [redacted] on 8/9/04 which answered our problem during a period prior to the ongoing

b6  
b7C

~~SECRET~~

situation which follows: b6  
b7C

[redacted]

I understand your office recently experienced some technical difficulty with one of your [redacted] Title III's. [redacted] informed me late Wednesday evening that [redacted] law enforcement support group suggested the lack of intercept audio problem may be due to a known bug in their new provisioning system. Over the last few months [redacted] has been transitioning from their old [redacted] Call Intercept Provisioning Center (CIPC) which is no longer supported by [redacted] and is not compatible with the new [redacted] switching software (GSM-17) used by [redacted] to the new SS8 Xcipio intercept provisioning system. [redacted] law enforcement support technicians have experienced a specific problem during this transition: pen-register failure after a Title-III expires but the pen-register order is still active. This problem is attributed to the porting of the old CIPC database to the new Xcipio database. SS8 is working with [redacted] to resolve this problem. b2  
b7E

However, this was not the symptom that your office recently experienced. Unfortunately, the support person on call late Wednesday evening did not fully understand the Xcipio issue - I got my information from their senior technician.

In an attempt to resolve the problem, the on call technician removed the intercept from the Xcipio database and re-entered it at sometime around 10 pm EDT. Your DCS-3000 indicates audio intercept was re-established at 18:30 Hawaii time that evening. So, it appears the act of re-provisioning the intercept resolved the problem. [redacted] senior technician is not convinced it was an Xcipio problem, and I am not sure either. b2  
b7E

Pen-register problems are much easier to troubleshoot than audio problems because the pen-register data is delivered using TCP/IP, for which we have many troubleshooting tools that we can remotely execute from Quantico and [redacted] can remotely execute from their offices in Virginia.

[redacted]

Troubleshooting audio intercept problems associated with wireless providers can sometimes be difficult. The reason is there are few troubleshooting tools available, and neither law enforcement nor the service provider has full access to both ends of the delivery system for troubleshooting. Both the law enforcement agency and service provider must attempt to troubleshoot the problem in concert. This often takes time to accomplish. b2  
b7E

For your most recent case, it is impossible to identify the exact point of failure in the delivery system since we did not have adequate time to test each point in the system before it started working again. We have a test phone and collection system similar to your office's system at ERF. We tested several scenarios yesterday and were unable to reproduce your problem. I also analyzed all your [redacted] pen-register information collected on the DCS-3000 on 8/4/2004. This data suggest that your other [redacted] Title-III was working fine during the period of failure for the 0027 number. This almost certainly eliminates the possibility that the problem was due to a conference bridge or external line resource limitation. [redacted] told me that you tested your collection system by calling into the ISDN delivery line and everything check out. So, the only plausible explanations for the failure are: 1) the [redacted] call intercept system failed for the specific target, or 2) the Xcipio system failed. That's my best guess. b2  
b7E

If you have any questions, please call me at 703 [redacted]

b6  
b7C

[redacted]

I was wondering if this situation still applies? Can you provide me with some answers?

Thanks.

[redacted]  
I've been informed that the Security Guidelines have changed, dated 7/22/04. There are several areas that affect recent and future installations for the DCS-3000 One Way Push. Three of the biggest impacts are as follows:

b2  
b7E

- 1) New marking procures defined to place FBI-approved tamper-indicating seals to secured [redacted] switches covering

SECRET

seams on the forward portion of both sides of the device. (How can we get large numbers of these seals ASAP?)

2) Screen Savers must display max classification level. (All systems shall require updating in order to meet this requirement.)

3) Maintenance of accountability and records of [redacted] switches installed, user names, name, model of switch and serial number and the levels connected. Info must be available for any reporting upon request. (This will require [redacted] since it's a new requirement. I'd prefer to have this information entered into a database as we discussed months ago? What ever happened to the development of a Classified version of the DCS-3000 database?)

b2  
b7E

There is considerable work required to go back and re-engineer these requirements to the previously installed equipment. Also, there are many new installations occurring w/ky. We will have to retrofit systems, image profiles, and certainly need the required "FBI-approved tamper seals" required for this effort. Please let me know if you can help expedite the tamper seals to ERF.

In the future, notification of changes would be helpful! Significant changes to those practicing security procedures for ERF and the field should be distributed to it's users. Without the proper notification we would not be compliant with the new security guidelines. Please let me know so that I can start retrofitting our deployed/deploying systems.

[redacted]

We recently had some lines switched over from Charlotte to Raleigh on the DCS 3000 system. That system crashed in the last couple of days and I had to switch out to a new DCS 3000 system.

Could you guys call into the system to reconfigure the system to start receiving the data again. The DCS 3000 system software might need updating, I don't know. I don't think this machine has been used previously.

The help number to call into the machine is 919 [redacted]

The password of the DCS 300 system is [redacted] all lower case letters) b2 b7E

Thanks

Guys,

b2  
b7E

The question continues to pop-up, how does the field handle FISA information; classified. or unclassified? Can we develop a procedure regarding the proper handling and transfer of data thru the DCS-3000 One Way Push into the [Redacted] Or use an alternate approach?

[Redacted] mentioned the possibility of using EDMS for each region and automajically download the Tel Apps. This may be a viable option? More details will be need for a discussion.

Other suggestions? Any way to provide the field with an answer?

Where: ERF  
When: May 3 - 7?  
Time: ?  
Subject: Develop capability to correlate CCC/CDC data for DCS-3000/5000

Last Wednesday, I spoke with [redacted] from Raytheon, and discussed the need to develop a sound, reliable solution to correlate the CDC/CCC data for the RedWolf and the DCS-3000. [redacted] will not be available next week, but the following week appears to be open. What day and time is best for each of you during the week of May 3-7? Please send me your requests and make sure that you include more than one choice. I will coordinate what works best for the majority. Thanks so much.

PS [redacted] informed me that [redacted] have made the decision to begin developing "A Time Based Correlation" for now. I don't have any details about how this algorithm is actually calculated. We can definitely get more specifics at our meeting. Is this the direction we wish to go, or are there other ideas? This is what we need to discuss. Please ponder on this. Thanks.

Subject: RE: Status

b6  
b7C

~~SENSITIVE BUT UNCLASSIFIED~~  
~~NON-RECORD~~

[redacted] There are three variables that I check in the One Way Push system; DCS 3000, TIU and the RedWolf. Historically, early in the program, I checked sessions received on the RedWolf against the DCS 3000. (During this test, only one of my three targets was reliable. The other two had problems at the central office CALEA setup so I did not include them in my testing.) After I found the CDC discrepancies between the DCS 3000 and the RedWolf, I got with [redacted] Raytheon, and we set up a log file to capture what entered the TIU from the One Way Push. I compared the first two days of that log with what sessions I got at the RedWolf. I found that about 10 per cent of the calls that appeared in the TIU log never made it to the RedWolf. Some of the calls were less than 5 seconds but the rest were of significant length ie 30 seconds or more.

[redacted] spoke with [redacted] and it was decided that I would send [redacted] some files from the TIU log. What I gave [redacted] was a different set of data than what I originally used. He ran a comparison of DCS 3000 data and TIU logs for the same period of time and found that the TIU logs showed significantly fewer calls than did the DCS 3000.

[redacted] came to Salt Lake City during 3/1-4/04. He installed a new baseline on the TIU. We compared four days of data

b6  
b7C

~~SECRET~~

~~SECRET~~

b6  
b7c

between the DCS 3000 and the RedWolf. There was a 100% correlation.

Our CALEA intercept expired on 3/16/04 but I am working with [redacted] to install a test surveillance at the central office we had all the problems with. That's about all I know. There are a couple of black holes that need filling in. I don't know what, if anything [redacted] did and I remember installing a couple of modifications for you. b2  
b7E

CDC/CCC data is correlated in RedWolf by comparing data in the CCCOPEN field of the CDC message to what the user enters into the Circuit ID field of the CCC setup page in the TIU. I don't know of any manual method of doing it. We had a problem in that 5E switches assign a trunk group number to each CALEA surveillance. For instance, let's say my first surveillance had 0059-0000 and 0059-0001 as the circuits my audio is leaving the switch on. Those numbers appear in the CCCopen field and RedWolf combines the two paths into a single session. When CCCopen data doesn't match what is entered in the Circuit ID field, RedWolf shows two different sessions, a data session with no audio and an audio call with no data.

Here's the problem. The TIU will not accept duplicate information in the Circuit ID field. Where the 5E switch uses only numbers to identify their outgoing trunk members, it is very possible that 5E switches from different central offices might assign the same number to identify the outgoing trunk members to an entirely different CALEA surveillance.

[redacted] switches include the unique name of the switch in their data so it can never be duplicated.

H [redacted]

There has been a lot of discussion regarding the status of the DCS-3000 One Way Push system. At your earliest convenience, could you please send a status update? When we spoke last week it sounded like things were vastly improved. The question is how reliable and how stable is the system performing? Are we continuing to loose data or has this issue been resolved? If so, what was the resolution?

Also, please help us understand how the data comparison is performed in order to assure that no data is lost, how is the CDC/CCC data correlated, etc. It is most advantageous to have the CDC/CCC data automatically correlated by the RedWolf, but my understanding is that the process is manual. Please describe the environment-(mechanisms) that are used to correlate this data. If there is anything you need from us, feel free to call any time.

Thanks [redacted] Have a great week! Enjoy your wife's Birthday Bash next week, we'll miss you in San Fran.

[redacted]  
There are several things going on that we probably need to coordinate. I sent an e-mail to [redacted] from TA on 1/17/06 and have had no response. We really need to have meeting with TA and start a dialogue on how the DCS 3000 information is utilized in TA. I had a 20 minute conversation with [redacted] this morning about such issues. It would be nice to have the TA people come down here and give us a demo of current capabilities for analysis of the CALEA data and talk about [redacted] data import. Second, I spoke with [redacted] last week. The Gang Task force circuit is in, he wants to know when we can come out and hook it up. Also, the old task force wants to do [redacted] So we are getting double teamed on this one. I suppose at least two members of the team need to go out and do this one. Third, we have several circuits that we are going to need cross connected from ERF to the new building. Does [redacted] have a plan for how we will request the circuits to be identified by both the originating and terminating locations? I forwarded the circuits from [redacted] on the 10th. In SBIT we have at least 5 lines also to cross connect. Let me know when you have had a chance to think about these. This morning was kind of crazy recovering things from the weekend.

We have to write up weekly accomplishments for the Director's report and feed back like this is greatly appreciated. If you have any more details that we could put in our write up about how we may have helped that would be awesome. I unfortunately am on leave Monday, so if you could CC [Redacted] on any response he is going to write it up. Tuesday is our deadline on getting something in for the report. I know you're busy so anything is helpful.

Thanks,

Thank you and great job. The guy they picked up in CT through info provided by the DCS-3000 system is the suspect in a double homicide which occurred in northern VT a couple of days ago. You helped save a lot of agencies a lot of money and man-hours and, most importantly, you helped take a bad guy off the street. Thanks again.

Below is the info you requested. I will follow up with [Redacted] this morning also. [Redacted] is out today on sick leave.

i. Switch Based Intercept Team.

- Developed Trilogy hosted [Redacted] application for utilization with CALEA pen register [Redacted] information.

[Redacted]

- Upgraded and maintained the DCSNET, which distributes CALEA pen register and packet audio, for the FBI's field offices. Also, migrated circuits for network robustness and failure recovery.

b2  
b7E

- Supported New Orleans operations relocation to [Redacted] by tactically engineering DCSNET connection and DCS 3000 equipment support.

- Upgraded DCS 3000 systems to incorporate [Redacted] systems into all major field office systems.

[Redacted]

[Redacted]

- Continued expertise and equipment support for ALL CALEA based intercepts for the FBI.

Below are the numbers for the requests. They seem very low but I asked [Redacted] twice about it.

SBIT	RMS Total	[Redacted]	b2
	RMS Closed	[Redacted]	b7E
	RMS Completed	[Redacted]	b6
	RMS Working	[Redacted]	b7C
	RMS Other Status	[Redacted]	

I asked [Redacted] to see if he can get our shipping report. A lot of times we take a call and just do a shipping form without opening an RMS. In hind sight this makes our stats look bad.

Traditional	RMS Total	[Redacted]
	RMS Closed	[Redacted]

RMS Completed  
RMS Working  
RMS Other Status

I apologize for the delay in responding. To answer your questions in order.

- 1) Two feeds should come to the DCS 3000 Lab and one to the DCS 5000 Lab.
- 2) These are NOT satellite dishes.
- 3) The 4' vertical pipes should suffice.

Thanks

[redacted]

thanks for the response. Just a couple specifics to clear up:

- 1) What lab(s) do the feeds from these 3 antennas need to go to?
- 2) These 3 are not satellite dishes, right? these are "pin type", AKA the type that "looks like a TV Antenna", right?
- 3) These 3 are the typical type that will mount onto the 4' vertical pipes on the rooftop platform, right? (similar to mounting style on top of Pod A roof now)

Thanks,

[redacted]

Somehow one the agents here obtained a court ordered pen register with [redacted] or a [redacted] account with just the [redacted] I'm assuming their source got the phone and copied the number. They are unable to get the subscriber name or associated phone no., per [redacted] because it is a [redacted] account. [redacted] has however provisioned it for the pen and [redacted] but needless to say the DCS3000 isn't collecting anything. Is it possible to collect based on an [redacted] or does the DCS need a ten digit phone number. It is currently in the Northern Calif. market with surveillance ID's and passwords available for Southern Calif. and the Arizona market. [redacted] has provided three separate surveillance id's and passwords for these markets. I don't know is the phone is being used outside of these three markets, which may explain why we haven't collected anything. The agent also has two other [redacted] lines set up in the same markets. They are collecting in Northern Calif., because I have them entered in Northern Calif. If they stop collecting, I was going to enter the other surveillance ID and password for the the Southern Calif. market; see if it collected and change it to the Arizona market if Southern Calif. didn't collect. Am I going in the right direction with this? Any guidance will be appreciated. Thanks [redacted]

Your have systems (EDMS, DCS systems, CART SAN, DITU systems) that may be designated as "Mission Critical". OTD System Managers are requested to provide information about the Continuity Of Operations Plans (COOP) for systems designated as mission critical. As noted in the attached EC, information is to be entered at the following FBI Intranet website by 8/5/2005.

b2  
b7E

[Redacted]

If your system is mission critical, please provide me with the system name and a copy of your COOP plan and an email response to indicate that you have provided the requested information to the website. If your system is not considered critical let me know that also.

[Redacted]

You may have a list of OTD systems that are dsignated "Mission Critical" and have or should have COOP plans. Please provide this list to me so that the PMO can make sure all appropriate system managers provide the requested info.

PMO will prepare an EC indicating OTD's compliance to the OCIO's request.

Hi all:

I just want to express how much I enjoyed the DCS3000 SW-based Intercept training, and the pleasure it was meeting all of you.

The class was very informative, and will serve as a great reference for my daily job responsibilities. Hopefully, the knowledge will allow me to be more comfortable with extracting information from the logs, but I'm sure I'll still be calling for your expertise and assistance.  
Thanks again for the excellent class, and the continuing support.

Good luck with the move to the new building!!  
Best regards,

b6  
b7C

[redacted]  
The Time Difference pick in the DCS 3000 pertains to the order expiration times. Since the DCS 3000 looks at the warrant database stop date and time to know when to stop receiving data we need to make sure that we have taken into account the GMT time difference so we don't undercollect in this instance. The if you leave it at [redacted]

b2  
b7E

[redacted] Hope this makes sense. On the DCS 3000 we DO NOT mess with time stamps within the data from the carrier. Other systems do use their computer clock times (i.e. the Voice Box). It is an issue that should be understood by anyone interpreting the data.

[redacted] Below is my synopsis version of [redacted] announcement.

"The Operational Technology Division's (OTD) Telecommunications Intercept and Collection Technology Unit (TICTU) has recently facilitated **realtime** audio and pen-register intercept for [redacted] Voice Over Internet Protocol (VoIP) telephony service. TICTU designed and developed a new intercept and delivery capability, using the DCS-3000 system, to perform intercepts for the Buffalo, New York and New York City Field Offices. The TICTU's infrastructure was instrumental in providing the conduit for this information to flow from the [redacted] delivery points to the offices performing the surveillance. These new services provide constant challenges to current Electronic Surveillance (ELSUR) collections. The realtime flow of this information will allow agents to immediately act on information if necessary. Also, TICTU recently assisted the New York City office with a pen-register intercept of a [redacted] VoIP telephony subscriber."

[redacted]  
We can connect FBI spaced RA's to the network and give them a DCS 3000 workstation to do this. A circuit will have to be built for the network to be extended to the RA. I suggest a 56k DDS (digital circuit) as opposed to a leased line or dial up. However, I know cost and time are always a factor and a dial up will work. If he monitors a target in the RA be advised that it is on equal standing with any other client requesting that target's information and that for completeness you must make sure that neither system has missed any information.

Hey señor,

I just created a very [redacted] (since I dont think anyone else here knows what a ping is...so that might make it easier to run). Anyway, I created it in the DCS 3000 directory and is called [redacted]. If you get a chance, take a look at it to make sure I dont bring the server down :-)

[redacted]

Anyway, just want to make sure its ok...

b2  
b7E

thanks,

[redacted]

(yes, I should have been home long ago but I've been here all day watching DCS-3000 for the kidnapping...and I finally moved the [redacted] to the DCS-3000 rack)...

I looked at the instructions you attached. I don't have access to TA so I am unable to go through the procedures. There are two issues to address here and I would like to make sure everyone keeps them straight.

[redacted]

b2  
b7E

b2  
b7E

The Second issue is the [redacted] usage. I enumerated the technical issues at the TICTU Conference and that presentation is on the TICTU website. I don't know of any plans for the [redacted] future. That would have to addressed to [redacted] group for the VB of [redacted] group for the [redacted]. Historically, when CALEA began it was thought that the VB would be doing pen registers. I think there are some offices which have tried this, however, there are serious volume concerns with how the VB will operate if pushed too far. I am not the expert on the VB's capacity or what form a TA uploadable output would take. I do caution that any VB output upload should be understood by the field personnel performing this action. What would be the timestamps, duration calculation parameters and will IAPSystem identity be captured?

b6  
b7C

I do feel these questions issues need discussion, otherwise I wouldn't have brought them up in my presentation at the Regional conferences. We are scheduling an internal unit meeting to discuss these issues more and I will keep you up to date on what I find out.

Greetings,

This is the referenced table. Below the table is a list of all the enhancements. Mr. Clifford's question is  
1. How do we have enhancements that pre-date the proof-of-concept.  
2. Do these costs capture all of the enhancement costs as well?

Please help!!! Feel free to update table with the correct info. I need your expert knowledge and answers back ASAP as the document which contains this table must be at the IG's office by noon today. Thanks again for your help.

Any and all testing you've performed to date has been to prove a concept. Therefore, I see no reason why you cannot "demo" this at the Tech Conference (just like you demonstrated it to me). Thus use the term "demo!"

This e-mail is not an approval to "test" though! I can't provide an IATT (interim approval to test) a system undergoing C&A until certain project milestones have been achieved...and you aren't there yet. Hope this helps.

I am not sure if you guys are the appropriate people to ask this question, but I thought that if you were not, you would know to whom to direct it.

I'm a TTA at WFO and I received a case agent question about intercepting text messaging on an [redacted] cell phone [redacted] The case agent is getting the audio intercepts but not any text messaging. Our plant people told her that she had to come to us (the TTA squad) to go after the messaging.

How does it work? What does the case agent need to do to go after the messaging.?

b2  
b7E

Again, if this matter falls elsewhere in your unit, please forward this to the appropriate personnel.

Thanks

[redacted] the case agent in [redacted] advised me today that the monitor ERF sent to the RA has stopped working. The power light is illuminated when the monitor is on (or power is cycled off and back on), however the screen remains blank. The RA has another monitor available, so no replacement is needed.

My question is do you want the broken monitor sent back to ERF or should I tell the agent to throw it in the trash?

[Redacted] we have left up the lease line between Seattle and Portland that was previously used for the DCS-3000, just in case we had problems with the new [Redacted] network. Since everything seems to be working fine with the new network, we are going to take down the old circuit. There is no activity on the modem, so it looks like there is nothing using that line. I just wanted to double check with you that there is no further need for that line. Let me know.

Gentlemen,

An update. This target, according to source information, utilizes the [redacted] feature. I have been in contact with [redacted] ERF, and have been advised that we will most likely be the first in the Bureau to do this type of intercept.

[redacted] advised me that in their tests so far, they use a separate DCS3000 to route the audio [redacted] DCS3000 [redacted] and then into VoiceBox just like a [redacted] input.

[redacted] advised me that there are three ways of getting this audio from the CMP/26 to BQ. The first choice would be to use the T-span, solely dedicated to this intercept. The second choice would be using the ISDN lines. I do currently have one ISDN line at BQ. We would have to have an open connection between my ISDN lines and the CMP's. I am trying to get information as to the cost involved in having the line open 24/7. The third choice would be a 56K dedicated circuit.

I will keep you advised as this should be educational.

[redacted] please correct me if I misunderstood anything I listed above.

Thank you,

[redacted]
