

Exhibit G Attachment, Sept. 17, 1997 in Bernstein v. Commerce

This is a series of page images from a fax machine.

If you want to view or print this document in pieces, here are the [first ten pages](#) and [remaining pages](#) . You can also download the individual image files, named "[page01.gif](#)", "[page02.gif](#)", etc. (01 through 22).

TIS Worldwide Survey of Cryptographic Products

DESCRIPTION:

In order to determine how widespread cryptography is in the world, Trusted Information Systems (TIS) has been conducting a survey of products employing cryptography both within and outside the U.S. While some amount of information about specific products here and there has been available, no one has previously assembled a comprehensive database with, where possible, verification of product availability. Originally commissioned by the Software Publisher's Association (SPA) in May 1993 and conducted in cooperation with Dr. Lance Hoffman of the George Washington University, an ongoing survey has been conducted by TIS for over three years. Information about cryptographic products continues to flow in on a daily basis. We are releasing summary information on a periodic basis. The summary statistics as of December 1996 are reported below. We also have summary listings of foreign and domestic products.

We have now identified 1393 products worldwide, and we're continuing to learn about new products, both domestic and foreign. The survey results show that cryptography is indeed widespread throughout the world. Export controls outside of the U.S. appear to be less restrictive. The quality of foreign products and of U.S. products to be comparable.

U.S. export controls have been modified recently to allow export of strong commercial cryptography in support of the American information industry's vital exporting ability. Foreign customers who need cryptographic-based security for their sensitive information can now turn to U.S. sources as well as foreign sources to fulfill that need.

CRYPTO SURVEY RESULTS:

Worldwide Availability of Cryptographic Products (as of December 1996)

FOREIGN PRODUCTS: We identified 570 foreign products from 28 countries:

Argentina	Australia	Austria
Belgium	Canada	Czech Rep.
Denmark	Finland	France
Germany	Hong Kong	India
Iran	Ireland	Israel
Italy	Japan	Mexico
Netherlands	New Zealand	Norway
Poland	Russia	South Africa
Spain	Sweden	Switzerland
UK		

Of these, 229 employ DES, 100 in software programs and kits produced in the following countries:

Argentina	1	Australia	7
Austria	2	Belgium	1
Canada	11	Denmark	5
Finland	2	Germany	17
Ireland	4	Israel	9
Italy	4	Japan	1
Netherlands	4	Poland	1
Russia	5	South Africa	4
Sweden	6	Switzerland	1
UK	14		

Some foreign companies have distributors throughout the world, including in the U.S. One U.K. company has distributors in at least 13 countries, and one German company has distributors in 14 countries.

DOMESTIC PRODUCTS: We identified 823 domestic products, 378 with DES.

TOTAL PRODUCTS: Worldwide total of 1393 products produced and distributed by 862 companies (442 foreign, 420 domestic) in at least 68 countries.

SOURCES OF INFORMATION: To provide a definitive assessment of the manufacture and distribution of cryptographic products throughout the world, the survey makes use of numerous sources of information: computer security product guides, including Datapro reports, Elsevier PC Security Guide, Computer Security Institute (CSI) Computer Security Products Buyer's Guide, and INFOSecurity News Buyer's Guide; various trade press and journal articles; product literature; Internet electronic mailing lists and news groups; on-line computer hardware and software databases; the web; and foreign embassies and trade associations.

CONFIRMATION OF PRODUCTS: Information about cryptographic products is collected into a comprehensive database, with, where possible, verification of product availability through direct inquiries of product manufacturers and distributors. However, TIS assumes no responsibility for the accuracy or completeness of the information.

TYPES OF PRODUCTS: The survey includes many types of cryptographic-based security products:

- hardware, firmware, software, or combinations thereof;
- general-purpose products (e.g., word processors, spreadsheets, telephones, or modems), as well as explicit cryptographic products (e.g., a PC file encryption utility);
- commercial mass-market products, as well as shareware and other products freely available via dial-up BBS connections or over the Internet via anonymous FTP or the Web;
- products providing confidentiality, integrity, and/or authentication service using cryptographic mechanisms.

OBTAINING FOREIGN PRODUCTS: We have obtained a number of products, focusing on software products employing the Data Encryption Standard (DES). The products were purchased via routine channels, either directly from the foreign manufacturer, or from a U.S.

distributor. The products were shipped to us within a few days and in several cases, overnight. Implementations of DES, RSA, and IDEA were obtained freely over the Internet from sites throughout the world.

ADDITIONAL INFORMATION: To obtain further information on the TIS worldwide survey of cryptographic products, or to provide any information you may have about cryptographic products, visit the crypto survey Web page at <http://www.tis.com/crypto/survey.html>, or contact David Balenson at 301-854-5358 or by sending email to <balenson@tis.com> via the Internet.

Crypto Survey - Foreign Products

Summary listing of foreign cryptographic products as of 1/17/97

This is a summary listing of foreign cryptographic products identified by Trusted Information Systems (TIS) as part of its ongoing worldwide survey of cryptographic products. We also have a summary listing of domestic products.
