Prob. Resolution: ixnt

On February 16, 2006 at 6:00 p.m. [REDACTED] traveled to [REDACTED] and observed that the signals had drifted up in frequency and were significantly reduced. [REDACTED] requested the assistance of the Philadelphia PD to enter the house.

The owner let the FCC agent and the police officers in to investigate. [REDACTED] found that a Sony 900 MHz spread spectrum cordless telephone was the source of the interference. On/Off tests verified that. The phone was located in a bedroom on the second floor. The owner of the house agreed not to use the telephone any more.
